

# Hardware Data Sheet Section II

## Ether**CAT** Slave Controller

Section I – Technology  
(Online at <http://www.beckhoff.com>)

**Section II – Register Description**  
Register overview and detailed  
description

Section III – Hardware Description  
(Online at <http://www.beckhoff.com>)

Version 2.9  
Date: 2017-02-21

**BECKHOFF**

## DOCUMENT ORGANIZATION

The Beckhoff EtherCAT Slave Controller (ESC) documentation covers the following Beckhoff ESCs:

- ET1200
- ET1100
- EtherCAT IP Core for Intel® FPGAs
- EtherCAT IP Core for Xilinx® FPGAs
- ESC20

The documentation is organized in three sections. Section I and section II are common for all Beckhoff ESCs, Section III is specific for each ESC variant.

The latest documentation is available at the Beckhoff homepage (<http://www.beckhoff.com>).

### Section I – Technology (All ESCs)

Section I deals with the basic EtherCAT technology. Starting with the EtherCAT protocol itself, the frame processing inside EtherCAT slaves is described. The features and interfaces of the physical layer with its two alternatives Ethernet and EBUS are explained afterwards. Finally, the details of the functional units of an ESC like FMMU, SyncManager, Distributed Clocks, Slave Information Interface, Interrupts, Watchdogs, and so on, are described.

Since Section I is common for all Beckhoff ESCs, it might describe features which are not available in a specific ESC. Refer to the feature details overview in Section III of a specific ESC to find out which features are available.

### Section II – Register Description (All ESCs)

Section II contains detailed information about all ESC registers. This section is also common for all Beckhoff ESCs, thus registers, register bits, or features are described which might not be available in a specific ESC. Refer to the register overview and to the feature details overview in Section III of a specific ESC to find out which registers and features are available.

### Section III – Hardware Description (Specific ESC)

Section III is ESC specific and contains detailed information about the ESC features, implemented registers, configuration, interfaces, pinout, usage, electrical and mechanical specification, and so on. Especially the Process Data Interfaces (PDI) supported by the ESC are part of this section.

### Additional Documentation

Application notes and utilities can also be found at the Beckhoff homepage. Pinout configuration tools for ET1100/ET1200 are available. Additional information on EtherCAT IP Cores with latest updates regarding design flow compatibility, FPGA device support and known issues are also available.

#### Trademarks

Beckhoff®, TwinCAT®, EtherCAT®, Safety over EtherCAT®, TwinSAFE® and XFC® are registered trademarks of and licensed by Beckhoff Automation GmbH & Co. KG. Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

#### Patent Pending

The EtherCAT Technology is covered, including but not limited to the following German patent applications and patents: DE10304637, DE102004044764, DE102005009224, DE102007017835 with corresponding applications or registrations in various other countries.

#### Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development. For that reason the documentation is not in every case checked for consistency with performance data, standards or other characteristics. In the event that it contains technical or editorial errors, we retain the right to make alterations at any time and without warning. No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

#### Copyright

The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization are prohibited. Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.

## DOCUMENT HISTORY

Version	Comment
1.0	Initial release
1.1	<ul style="list-style-type: none"> <li>Latch0/1 state register bit 0x09AE[2] and 0x09AF[2] added (ET1100 and IP Core)</li> <li>On-chip Bus configuration for Avalon®: Extended PDI configuration register 0x0152[1:0] added</li> </ul>
1.2	<ul style="list-style-type: none"> <li>On-chip Bus configuration: Extended PDI configuration register 0x0152[1:0] now valid for both Avalon and OPB</li> <li>ESC DL Status: PDI Watchdog Status constantly 1 for ESC10</li> <li>EEPROM Control/Status: Selected EEPROM Algorithm not readable for ESC10/20</li> </ul>
1.3	<ul style="list-style-type: none"> <li>EEPROM/MII Management Interface: Added self-clearing feature of command register</li> <li>SPI extended configuration (0x0152:0x0153): Reset Value is EEPROM word 3, not word 1</li> <li>ESC DL Control (0x0100[0]): Added details about Source MAC address change</li> <li>Power-On Values ET1100 (0x0E000): P_CONF does not correspond with physical ports</li> </ul>
1.4	<ul style="list-style-type: none"> <li>Sync/Latch PDI configuration register: Latch configuration clarified</li> <li>AL Control register: mailbox behavior described</li> <li>Editorial changes</li> </ul>
1.5	<ul style="list-style-type: none"> <li>ESC DL Control (0x0100:0x0103): FIFO Size description enhanced</li> <li>IP Core: Extended Features (reset value of User RAM 0x0F80:0x0FFF) added</li> <li>MII Management Interface: Write access by PDI is only possible for ET1100 if Transparent Mode is enabled. Corrected register read/write descriptions.</li> <li>MII Management Control/Status register (0x0510:0x0511): Error bit description clarified. Write Enable bit is self-clearing.</li> <li>ESC DL Control (0x0100:0x0103): Temporary setting DL not available for ESC10/20</li> <li>EEPROM PDI Access State register (0x0501): write access depends on EEPROM configuration</li> <li>EEPROM Control/Status register (0x0502:0x0503): Error bit description clarified. Write Enable bit is self-clearing.</li> <li>Registers initialized from EEPROM have Reset value 0, and EEPROM value after EEPROM was loaded successful</li> <li>AL Event Request (0x0220:0x0223) description clarified: SyncManager configuration changed interrupt indicates activation register changes.</li> <li>DC Latch0/1 Status (0x09AE:0x09AF): Event flags are only available in Single event mode</li> <li>DC SYNC0 Cycle Time (0x09A0:0x09A3): Value of 0 selects single pulse generation</li> <li>64 Bit Receive Time ECAT Processing Unit (0x0918:0x091F) is also available for 32 Bit DCs. Renamed register to Receive Time ECAT Processing Unit</li> <li>RAM Size (0x0006) ET1200: 1 Kbyte</li> <li>Editorial changes</li> </ul>

Version	Comment
1.6	<ul style="list-style-type: none"> <li>EEPROM Control/Status register (0x0502:0x0503): Error bit description clarified</li> <li>EEPROM Interface and MII Management Interface: access to special registers is blocked while interface is busy</li> <li>EEPROM Interface: EEPROM emulation by PDI added</li> <li>Extended IP Core features (0x0F80:0x0FFF): reset values moved to Section III</li> <li>Reset values of DC Receive Time registers are undefined</li> <li>MI Control/Status register bit 0x510[7] is read only</li> <li>FMMUs supported (0x0004): ET1200 has 3 FMMUs, not 4</li> <li>AL Event Request register: SyncManager changed flag (0x220[4]) is not available in IP Core versions before and including 1.1.1/1.01b</li> <li>Configured Station Alias (0x0012:0x0013) is only taken over at first EEPROM load after power-on or reset</li> <li>Moved available PDIs depending on ESC to Section I</li> <li>SyncManager PDI Control (0x807 etc.): difference between read and write access described</li> <li>General Purpose I/O registers (0x0F10:0x0F1F) width variable (1/2/4/8 Byte)</li> <li>MI Management Interface enhancement: link detection and assignment to PDI added</li> <li>Write access to DC Time Loop Control unit by PDI configurable for IP Core (V2.0.0/2.00a)</li> <li>Editorial changes</li> </ul>
1.7	<ul style="list-style-type: none"> <li>MI Management Control/Status (0x0510) updated: PHY address offset is 5 bits, feature bits have moved</li> <li>System time register (0x0910:0x0917): clarified functionality</li> <li>Process Data RAM (0x1000 ff.): accessible only if EEPROM is loaded</li> <li>Digital I/O extended configuration (0x0152:0x0153): Set to 0 in bidirectional mode</li> <li>Editorial changes</li> </ul>
1.8	<ul style="list-style-type: none"> <li>DC register accessibility depends on DC power saving settings in PDI Control register (0x0140[11:10])</li> <li>AL Event Request register (0x0220): AL Control Event (Bit 0) is cleared by reading AL Control register (0x0120), not AL Event Request register</li> <li>EEPROM Control/Status register bit 0x0502[12] renamed to EEPROM loading status</li> <li>Description of Push-Pull/Open-Drain output drivers for SPI, µController, and SYNC0/1 enhanced</li> <li>Speed Counter Start register (0x0930:0x0931): Write access resets calculated Time Loop Control values</li> <li>Speed Counter Diff register (0x0932:0x0933): Deviation calculation added</li> <li>DC Start Time Cyclic operation (0x0990:0x0997) and Next Sync1 Pulse (0x0998:0x099F) relate to the System time</li> <li>Reset DC Control loop (write 0x0930:0x0931) after changing filter depths (0x0934 or 0x0935)</li> <li>Editorial changes</li> </ul>
1.9	<ul style="list-style-type: none"> <li>Update to EtherCAT IP Core Release 2.2.0/2.02a</li> <li>Register availability added</li> <li>Writing to DC Filter Depth registers 0x0934:0x0935 resets filters</li> <li>DC Activation register (0x0981) enhanced</li> <li>DC Activation state register (0x0984) added</li> <li>Reserved registers or register bits: write 0, ignore read values</li> <li>Enhanced link detection 0x0141[1] has compatibility issues with EBUS ports, not MII ports</li> <li>Port dependent Enhanced link detection (0x0140[15:12]) added</li> <li>PHY Port y Status bit 5 added (port configuration updated)</li> <li>ESC10 removed</li> <li>Editorial changes</li> </ul>

Version	Comment
2.0	<ul style="list-style-type: none"> <li>DC SYNC Activation register (0x0981[6]): bit polarity corrected</li> <li>Deviation calculation formula for Speed Counter Diff register (0x0932:0x0933) corrected</li> <li>AL Event Mask register (0x0204:0x0207): corresponding to AL Event Request register bits, not to ECAT Event Request register bits</li> <li>Register availability noted in ESC availability tabs</li> <li>Register Digital I/O configuration (0x0150): corrected OUTVALID mode = 1 description</li> <li>Power-on values ET1200 (0x0E00[6]): CLK25OUT on PDI[6], not PDI[31]</li> <li>Editorial changes</li> </ul>
2.1	<ul style="list-style-type: none"> <li>Register bit 0x0220[4] is not available for ESC20</li> <li>DC System Time (0x0910:0x0917): read value differs between ECAT and PDI</li> <li>DC Latch Times and DC Event Times are internally latched when lowest byte is read</li> <li>DC Speed Counter Start (0x0930:0x0931): minimum value is 0x80</li> <li>Editorial changes</li> </ul>
2.2	<ul style="list-style-type: none"> <li>ESC20: Register Configured Station Alias (0x0012:0x0013) is taken over after each EEPROM reload command</li> <li>MII Management Control register 0x0510[0]: Updated to ET1100-0002</li> <li>Registers 0x0020 and 0x0030 are readable for ET1100 and ET1200</li> <li>Editorial changes</li> </ul>
2.3	<ul style="list-style-type: none"> <li>Update to EtherCAT IP Core Release 2.3.0/2.03a (registers 0x0138/0x0139, 0x0150 On-chip Bus, 0x0220, 0x030E, 0x0805 affected)</li> <li>Separated registers 0x0140 (PDI Control) and 0x0141 (now: ESC Configuration)</li> <li>Editorial changes</li> </ul>
2.4	<ul style="list-style-type: none"> <li>ESC DL Control register (0x0100[0]) description changed</li> <li>Added ESC Feature Bits 0x0008[11:9]</li> <li>Update to EtherCAT IP Core Release 2.3.2/2.03c</li> <li>ESC Features 0x0008 and ESC Configuration 0x0141[1]: Enhanced Link Detection must not be activated for ET1100/ET1200 if EBUS ports are used.</li> <li>Editorial changes</li> </ul>
2.5	<ul style="list-style-type: none"> <li>Update to EtherCAT IP Core Release 2.4.0/2.04a</li> <li>ESC20: 0x0140[1:0] and [5:4] are available for SPI PDI</li> <li>Range for DC Speed Counter Start (0x0930:0x0931) and Speed Counter Diff (0x0932:0x0933) corrected, representation of Speed Counter Diff mentioned.</li> </ul>
2.6	<ul style="list-style-type: none"> <li>Update to EtherCAT IP Core Release 3.0.0</li> <li>Added Register DC Receive Time Latch Mode 0x0936</li> <li>Device Identification in AL Control/Status register 0x0120/0x0130 added</li> <li>Editorial changes</li> </ul>
2.7	<ul style="list-style-type: none"> <li>Update to EtherCAT IP Core Release 2.4.3/2.04d and 3.0.2/3.00c</li> <li>Editorial changes</li> </ul>

WD	Watchdog

## 1 Address Space Overview

An EtherCAT Slave Controller (ESC) has an address space of 64KByte. The first block of 4KByte (0x0000:0x0FFF) is dedicated to registers. The Process Data RAM starts at address 0x1000, its size depends on the ESC. The availability of the registers depends on the ESC.

Table 1: ESC address space

Address <sup>1</sup>	Length (Byte)	Description
<b>ESC Information</b>		
0x0000	1	Type
0x0001	1	Revision
0x0002:0x0003	2	Build
0x0004	1	FMMUs supported
0x0005	1	SyncManagers supported
0x0006	1	RAM Size
0x0007	1	Port Descriptor
0x0008:0x0009	2	ESC Features supported
<b>Station Address</b>		
0x0010:0x0011	2	Configured Station Address
0x0012:0x0013	2	Configured Station Alias
<b>Write Protection</b>		
0x0020	1	Register Write Enable
0x0021	1	Register Write Protection
0x0030	1	ESC Write Enable
0x0031	1	ESC Write Protection
<b>Data Link Layer</b>		
0x0040	1	ESC Reset ECAT
0x0041	1	ESC Reset PDI
0x0100:0x0103	4	ESC DL Control
0x0108:0x0109	2	Physical Read/Write Offset
0x0110:0x0111	2	ESC DL Status
<b>Application Layer</b>		
0x0120:0x0121	2	AL Control
0x0130:0x0131	2	AL Status
0x0134:0x0135	2	AL Status Code
0x0138	1	RUN LED Override
0x0139	1	ERR LED Override
<b>PDI / ESC Configuration</b>		
0x0140	1	PDI Control
0x0141	1	ESC Configuration
0x014E:0x014F	2	PDI Information
0x0150	1	PDI Configuration
0x0151	1	SYNC/LATCH[1:0] PDI Configuration
0x0152:0x0153	2	Extended PDI Configuration

<sup>1</sup> Address areas not listed here are reserved. They are not writable. Read data from reserved addresses has to be ignored. Reserved addresses must not be written.

Address <sup>1</sup>	Length (Byte)	Description
		<b>Interrupts</b>

0x09B8:0x09BF	4/8	Latch0 Time Negative Edge
0x09C0:0x09C7	4/8	Latch1 Time Positive Edge
0x09C8:0x09CF	4/8	Latch1 Time Negative Edge

Address <sup>1</sup>	Length (Byte)	Description
		<b>DC – SyncManager Event Times</b>
0x09F0:0x09F3	4	EtherCAT Buffer Change Event Time
0x09F8:0x09FB	4	PDI Buffer Start Event Time
0x09FC:0x09FF	4	PDI Buffer Change Event Time
		<b>ESC specific</b>
0x0E00:0x0EFF	256	ESC specific registers: ET1100, ET1200, (Power-On Values) IP Core (Product and Vendor ID) ESC20 (FPGA Update)
		<b>ESC specific I/O</b>
0x0F00:0x0F03	4	Digital I/O Output Data
0x0F10:0x0F17	1-8	General Purpose Outputs
0x0F18:0x0F1F	1-8	General Purpose Inputs
		<b>User RAM/Extended ESC features</b>
0x0F80:0x0FFF	128	User RAM
		<b>Process Data RAM</b>
0x1000:0x1003	4	Digital I/O Input Data
0x1000:0x13FF	1 KB	Process Data RAM
0x1000:0x17FF	2 KB	
0x1000:0x1FFF	4 KB	
0x1000:0x2FFF	8 KB	
0x1000:0x4FFF	16 KB	
0x1000:0x8FFF	32 KB	
0x1000:0xFFFF	60 KB	

For registers longer than one byte, the LSB has the lowest and MSB the highest address.

## 1.1 Scope of Section II

Section II contains detailed information about all ESC registers. This section is also common for all Beckhoff ESCs, thus registers, register bits, or features are described which might not be available in a specific ESC. Refer to the register overview in Section III of a specific ESC to find out which registers are available. Additionally, refer to the feature details overview in Section III of a specific ESC to find out which features are available.

The following Beckhoff ESCs are covered by Section II:

- ET1200-0003
- ET1100-0003
- EtherCAT IP Core for Intel FPGAs (V2.4.4 / V3.0.10)
- EtherCAT IP Core for Xilinx FPGAs (V2.04e / V3.00k)
- ESC20 (Build 22)

## 1.2 Reserved Registers/Reserved Register Bits

Reserved registers must not be written, reserved register bits have to be written as 0. Read values of reserved registers or register bits have to be ignored. Reserved registers or register bits initialized by EEPROM values have to be initialized with 0.

Reserved EEPROM words of the ESC configuration area have to be 0.

### 1.3 ESC Availability Tab Legend

The availability of registers and exceptions for individual register bits or IP Core versions are indicated in a small area at the top right edge of each register table.

#### Example 1:

ESC20	<b>ET1100</b>	<b>ET1200</b>	<b>IP Core</b>
		{5}	V2.0.0/ V2.00a

- Register is not available for ESC20 (reserved)
- Register is available for ET1100 (all bits mentioned below)
- Register is available for ET1200, except for bit 5 which is reserved
- Register is available for IP Core since V2.0.0/V2.00a, reserved for previous versions

#### Example 2:

ESC20	<b>ET1100</b>	<b>ET1200</b>	<b>IP Core</b>
	write config.		{5} V2.0.0/ V2.00a

- Register is available for ET1100 (read), write access is optionally available (e.g. ESI EEPROM or IP Core configuration)
- Register is available for IP Core, bit 5 is available since V2.0.0/V2.00a, bit 5 is not available for previous versions (and reserved)

#### Example 3:

ESC20	<b>ET1100</b>	<b>ET1200</b>	<b>IP Core</b>
	[63:16] config.		V2.0.0/ V2.00a

- Register is available for ET1100, bits [63:16] are optionally available (e.g. ESI EEPROM or IP Core configuration)
- Register is optionally available/configurable for IP Core since V2.0.0/V2.00a ("IP Core" is not **bold**)

## 2 Register description

		ESC20	ET1100	ET1200	IP Core
		read			read: V2.4.0/ V2.04a
Bit	Description	ECAT	PDI	Reset Value	
0	If register write protection is enabled, this register has to be written in the same Ethernet frame (value does not matter) before other writes to this station are allowed. This bit is self-clearing at the beginning of the next frame (SOF), or if Register Write Protection is disabled.	r/w	r/-	0	
7:1	Reserved, write 0	r/-	r/-	0	

## 2.12 Register Write Protection (0x0021)

**Table 13: Register Register Write Protection (0x0021)**

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Register write protection: 0: Protection disabled 1: Protection enabled  Registers 0x0000:0x0F7F are write-protected, except for 0x0020 and 0x0030.	r/w	r/-	0	
7:1	Reserved, write 0	r/-	r/-	0	

## 2.13 ESC Write Enable (0x0030)

**Table 14: Register ESC Write Enable (0x0030)**

Bit	Description	ESC20	ET1100	ET1200	IP Core
		read			read: V2.4.0/ V2.04a
0	If ESC write protection is enabled, this register has to be written in the same Ethernet frame (value does not matter) before other writes to this station are allowed. This bit is self-clearing at the beginning of the next frame (SOF), or if ESC Write Protection is disabled.	r/w	r/-	0	
7:1	Reserved, write 0	r/-	r/-	0	

## 2.14 ESC Write Protection (0x0031)

**Table 15: Register ESC Write Protection (0x0031)**

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Write protect: 0: Protection disabled 1: Protection enabled  All areas are write-protected, except for 0x0030.	r/w	r/-	0	
7:1	Reserved, write 0	r/-	r/-	0	

## 2.15 ESC Reset ECAT (0x0040)

Table 16: Register ESC Reset ECAT (0x0040)

					ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value				
Write								
7:0	A reset is asserted after writing 0x52 ('R'), 0x45 ('E') and 0x53 ('S') in this register with 3 consecutive frames.	r/w	r/-	0				
Read								
1:0	Progress of the reset procedure: 01: after writing 0x52 10: after writing 0x45 (if 0x52 was written before) 00: else	r/w	r/-	00				
7:2	Reserved, write 0	r/-	r/-	0				

## 2.16 ESC Reset PDI (0x0041)

Table 17: Register ESC Reset PDI (0x0041)

					ESC20	ET1100	ET1200	IP Core
								V2.2.0/ V2.02a
Bit	Description	ECAT	PDI	Reset Value				
Write								
7:0	A reset is asserted after writing 0x52 ('R'), 0x45 ('E') and 0x53 ('S') in this register with 3 consecutive commands.	r/-	r/w	0				
Read								
1:0	Progress of the reset procedure: 01: after writing 0x52 10: after writing 0x45 (if 0x52 was written before) 00: else	r/-	r/w	00				
7:2	Reserved, write 0	r/-	r/-	0				

## 2.17 ESC DL Control (0x0100:0x0103)

Table 18: Register ESC DL Control (0x0100:0x0103)

					ESC20	ET1100	ET1200	IP Core
					{1} [23:19]	[23:20] -0003	[23:20] -0003	[24] config. V2.4.0/ V2.04a [23:20] V2.4.3/ V2.04d [19]
Bit	Description	ECAT	PDI	Reset Value				
0	Forwarding rule: 0: EtherCAT frames are processed, non-EtherCAT frames are forwarded without processing or modification. The source MAC address is not changed for any frame. 1: EtherCAT frames are processed, non-EtherCAT frames are destroyed. The source MAC address is changed by the Processing Unit for every frame (SOURCE_MAC[1] is set to 1 – locally administered address).	r/w	r/-	1				
1	Temporary use of settings in 0x0100:0x0103[8:15]: 0: permanent use 1: use for about 1 second, then revert to previous settings	r/w	r/-	0				
7:2	Reserved, write 0	r/-	r/-	0				
9:8	Loop Port 0: 00: Auto 01: Auto Close 10: Open 11: Closed  NOTE: Loop open means sending/receiving over this port is enabled, loop closed means sending/receiving is disabled and frames are forwarded to the next open port internally. Auto: loop closed at link down, opened at link up Auto Close: loop closed at link down, opened with writing 01 again after link up (or receiving a valid Ethernet frame at the closed port) Open: loop open regardless of link state Closed: loop closed regardless of link state	r/w*	r/-	00				
11:10	Loop Port 1: 00: Auto 01: Auto Close 10: Open 11: Closed	r/w*	r/-	00				
13:12	Loop Port 2: 00: Auto 01: Auto Close 10: Open 11: Closed	r/w*	r/-	00				

Bit	Description	ECAT	PDI	Reset Value
15:14	Loop Port 3: 00: Auto 01: Auto Close 10: Open 11: Closed	r/w*	r/-	ET1200: 11 others: 00
18:16	RX FIFO Size (ESC delays start of forwarding until FIFO is at least half full). RX FIFO Size/RX delay reduction** : Value: EBUS:      MII: 0:      -50 ns      -40 ns (-80 ns***) 1:      -40 ns      -40 ns (-80 ns***) 2:      -30 ns      -40 ns 3:      -20 ns      -40 ns 4:      -10 ns      no change 5:      no change      no change 6:      no change      no change 7:      default      default  NOTE: EEPROM value is only taken over at first EEPROM load after power-on or reset	r/w	r/-	7 IP Core since V2.4.3/V2.04d: 7, later EEPROM word 5[11:9] inverted
19	EBUS Low Jitter: 0: Normal jitter 1: Reduced jitter	r/w	r/-	0
21:20	Reserved, write 0	r/w	r/-	0, later EEPROM word 5[5:4]
22	EBUS remote link down signaling time: 0: Default (~660 ms) 1: Reduced (~80 µs)	r/w	r/-	0, later EEPROM word 5[6]
23	Reserved, write 0	r/w	r/-	0, later EEPROM word 5[7]
24	Station alias: 0: Ignore Station Alias 1: Alias can be used for all configured address command types (FPRD, FPWR, ...)	r/w	r/-	0
31:25	Reserved, write 0	r/-	r/-	0

\* Loop configuration changes are delayed until the end of a currently received or transmitted frame at the port.

\*\* The possibility of RX FIFO Size reduction depends on the clock source accuracy of the ESC and of every connected EtherCAT/Ethernet devices (master, slave, etc.). RX FIFO Size of 7 is sufficient for 100ppm accuracy, FIFO Size 0 is possible with 25ppm accuracy (frame size of 1518/1522 Byte).

\*\*\* Reduction by 80 ns for IP Core since V3.0.0/V3.00c only, otherwise reduction by 40 ns

## 2.18 Physical Read/Write Offset (0x0108:0x0109)

Table 19: Register Physical Read/Write Offset (0x0108:0x0109)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
15:0	<p>This register is used for ReadWrite commands in Device Addressing mode (FPRW, APRW, BRW).</p> <p>The internal read address is directly taken from the offset address field of the EtherCAT datagram header, while the internal write address is calculated by adding the Physical Read/Write Offset value to the offset address field.</p> <p>Internal read address = ADR, internal write address = ADR + R/W-Offset</p>	r/w	r/-	0	

## 2.19 ESC DL Status (0x0110:0x0111)

Table 20: Register ESC DL Status (0x0110:0x0111)

Bit	Description	ESC20			Reset Value
		ECAT	PDI	ET1100 ET1200 IP Core	
0	PDI operational/EEPROM loaded correctly: 0: EEPROM not loaded, PDI not operational (no access to Process Data RAM) 1: EEPROM loaded correctly, PDI operational (access to Process Data RAM)	r*/-	r/-		0
1	PDI Watchdog Status: 0: Watchdog expired 1: Watchdog reloaded	r*/-	r/-		0
2	Enhanced Link detection: 0: Deactivated for all ports 1: Activated for at least one port  NOTE: EEPROM value is only transferred into this register at first EEPROM load after power-on or reset	r*/-	r/-	ET1100/ET1200: 1 until first EEPROM load, then EEPROM word 0[9] IP Core with feature: 1 until first EEPROM load, then 0 if EEPROM word 0[9]=0 and EEPROM word 0[15:12]=0x0, else 1 Others: 0	
3	Reserved	r*/-	r/-		0
4	Physical link on Port 0: 0: No link 1: Link detected	r*/-	r/-		0
5	Physical link on Port 1: 0: No link 1: Link detected	r*/-	r/-		0
6	Physical link on Port 2: 0: No link 1: Link detected	r*/-	r/-		0
7	Physical link on Port 3: 0: No link 1: Link detected	r*/-	r/-		0
8	Loop Port 0: 0: Open 1: Closed	r*/-	r/-		0
9	Communication on Port 0: 0: No stable communication 1: Communication established	r*/-	r/-		0
10	Loop Port 1: 0: Open 1: Closed	r*/-	r/-		0
11	Communication on Port 1: 0: No stable communication 1: Communication established	r*/-	r/-		0

Bit	Description	ECAT	PDI	Reset Value
12	Loop Port 2: 0: Open 1: Closed	r*/-	r/-	0
13	Communication on Port 2: 0: No stable communication 1: Communication established	r*/-	r/-	0
14	Loop Port 3: 0: Open 1: Closed	r*/-	r/-	0
15	Communication on Port 3: 0: No stable communication 1: Communication established	r*/-	r/-	0

\* Reading DL Status register from ECAT clears ECAT Event Request 0x0210[2]. Avoid reading DL Status register from PDI.

**Table 21: Decoding port state in ESC DL Status register 0x0111 (typical modes only)**

Register 0x0111	Port 3	Port 2	Port 1	Port 0
0x55	No link, closed	No link, closed	No link, closed	No link, closed
0x56	No link, closed	No link, closed	No link, closed	Link, open
0x59	No link, closed	No link, closed	Link, open	No link, closed
0x5A	No link, closed	No link, closed	Link, open	Link, open

0xD9	Link, closed	No link, closed	Link, open	No link, closed
0xDA	Link, closed	No link, closed	Link, open	Link, open

## 2.20 AL Control (0x0120:0x0121)

Table 22: Register AL Control (0x0120:0x0121)

		ESC20	ET1100	ET1200	IP Core
		{15:5} (w-ack)	(w-ack)	(w-ack)	[15:5] V2.4.0/ V2.04a
Bit	Description	ECAT	PDI	Reset Value	
3:0	Initiate State Transition of the Device State Machine: 1: Request Init State 3: Request Bootstrap State 2: Request Pre-Operational State 4: Request Safe-Operational State 8: Request Operational State	r/(w)	r/ (w ack)*	1	
4	Error Ind Ack: 0: No Ack of Error Ind in AL status register 1: Ack of Error Ind in AL status register	r/(w)	r/ (w ack)*	0	
5	Device Identification: 0: No request 1: Device Identification request	r/(w)	r/ (w ack)*	0	
15:6	Reserved, write 0	r/(w)	r/ (w ack)*	0	

NOTE: AL Control register behaves like a mailbox if Device Emulation is off (0x0141[0]=0): The PDI has to read/write\* the AL Control register after ECAT has written it. Otherwise ECAT cannot write again to the AL Control register. After Reset, AL Control register can be written by ECAT. (Regarding mailbox functionality, both low and high byte of the AL Control register trigger read/write functions, e.g., reading 0x0121 is sufficient to make this register writable again)

If Device Emulation is on, the AL Control register can always be written, its content is copied to the AL Status register.

\* PDI register function acknowledge by Write command is disabled: Reading AL Control from PDI clears AL Event Request 0x0220[0]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing AL Control from PDI clears AL Event Request 0x0220[0]. Writing to this register from PDI is possible; write value is ignored (write 0).

## 2.21 AL Status (0x0130:0x0131)

Table 23: Register AL Status (0x0130:0x0131)

		ESC20 [15:5]	ET1100	ET1200	IP Core [15:5] V2.4.0/ V2.04a
Bit	Description	ECAT	PDI	Reset Value	
3:0	Actual State of the Device State Machine: 1: Init State 3: Bootstrap State 2: Pre-Operational State 4: Safe-Operational State 8: Operational State	r*/-	r/(w)	1	
4	Error Ind: 0: Device is in State as requested or Flag cleared by command 1: Device has not entered requested State or changed State as result of a local action	r*/-	r/(w)	0	
5	Device Identification: 0: Device Identification not valid 1: Device Identification loaded	r*/-	r/(w)	0	
15:6	Reserved, write 0	r*/-	r/(w)	0	

NOTE: AL Status register is only writable from PDI if Device Emulation is off (0x0141[0]=0), otherwise AL Status register will reflect AL Control register values. Avoid reading AL Status register from PDI.

\* Reading AL Status from ECAT clears ECAT Event Request 0x0210[3].

## 2.22 AL Status Code (0x0134:0x0135)

Table 24: Register AL Status Code (0x0134:0x0135)

		ESC20	ET1100	ET1200	IP Core V1.0.0/ V1.01b
Bit	Description	ECAT	PDI	Reset Value	
15:0	AL Status Code	r/-	r/w	0	

## 2.23 RUN LED Override (0x0138)

**Table 25: Register RUN LED Override (0x0138)**

		ESC20	ET1100	ET1200	IP Core
					V2.3.0/ V2.03a
Bit	Description	ECAT	PDI	Reset Value	
3:0	LED code: 0x0: Off 0x1: Flash 1x 0x2-0xC: Flash 2x – 12x 0xD: Blinking 0xE: Flickering 0xF: On AL Status: Init (1) SafeOp (4) - PreOp (2) Bootstrap (3) Operational (8)	r/w	r/w	0	
4	Enable Override: 0: Override disabled 1: Override enabled	r/w	r/w	0	
7:5	Reserved, write 0	r/w	r/w	0	

NOTE: Changes to AL Status register (0x0130) with valid values will disable RUN LED Override (0x0138[4]=0). The value read in this register always reflects current LED output.

## 2.24 ERR LED Override (0x0139)

**Table 26: Register ERR LED Override (0x0139)**

		ESC20	ET1100	ET1200	IP Core
					V2.3.0/ V2.03a
Bit	Description	ECAT	PDI	Reset Value	
3:0	LED code: 0x0: Off 0x1-0xC: Flash 1x – 12x 0xD: Blinking 0xE: Flickering 0xF: On	r/w	r/w	0	
4	Enable Override: 0: Override disabled 1: Override enabled	r/w	r/w	0	
7:5	Reserved, write 0	r/w	r/w	0	

NOTE: New error conditions will disable ERR LED Override (0x0139[4]=0). The value read in this register always reflects current LED output.

## 2.25 PDI Control (0x0140)

**Table 27: Register PDI Control (0x0140)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
7:0	Process data interface: 0x00: Interface deactivated (no PDI) 0x01: 4 Digital Input 0x02: 4 Digital Output 0x03: 2 Digital Input and 2 Digital Output 0x04: Digital I/O 0x05: SPI Slave 0x06: Oversampling I/O 0x07: EtherCAT Bridge (port 3) 0x08: 16 Bit asynchronous Microcontroller interface 0x09: 8 Bit asynchronous Microcontroller interface 0x0A: 16 Bit synchronous Microcontroller interface 0x0B: 8 Bit synchronous Microcontroller interface 0x10: 32 Digital Input and 0 Digital Output 0x11: 24 Digital Input and 8 Digital Output 0x12: 16 Digital Input and 16 Digital Output 0x13: 8 Digital Input and 24 Digital Output 0x14: 0 Digital Input and 32 Digital Output 0x80: On-chip bus Others: Reserved	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 0	

## 2.26 ESC Configuration (0x0141)

Table 28: Register ESC Configuration (0x0141)

		ESC20 [7:4]	ET1100 [7:4]	ET1200 [7:2]	IP Core [7:4] V2.2.0/ V2.02a
Bit	Description	ECAT	PDI	Reset Value	
0	Device emulation (control of AL status): 0: AL status register has to be set by PDI 1: AL status register will be set to value written to AL control register	r/-	r/-	IP Core: 1 with Digital I/O PDI, PDI_EMULATION pin with $\mu$ C/On-chip bus Others: 0, later EEPROM word 0	
1	Enhanced Link detection all ports: 0: disabled (if bits [7:4]=0) 1: enabled at all ports (overrides bits [7:4])	r/-	r/-	1, later EEPROM word 0	
2	Distributed Clocks SYNC Out Unit: 0: disabled (power saving) 1: enabled	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 0	
3	Distributed Clocks Latch In Unit: 0: disabled (power saving) 1: enabled	r/-	r/-		
4	Enhanced Link port 0: 0: disabled (if bit 1=0) 1: enabled	r/-	r/-		
5	Enhanced Link port 1: 0: disabled (if bit 1=0) 1: enabled	r/-	r/-		
6	Enhanced Link port 2: 0: disabled (if bit 1=0) 1: enabled	r/-	r/-		
7	Enhanced Link port 3: 0: disabled (if bit 1=0) 1: enabled	r/-	r/-		

NOTE: EEPROM values of bits 1, 4, 5, 6, and 7 are only transferred into this register at first EEPROM load after power-on or reset.

## 2.27 PDI Information (0x014E:0x014F)

Table 29: Register PDI Information (0x014E:0x014F)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
0	PDI function acknowledge by write: 0: Disabled 1: Enabled	r/-	r/-	IP Core: Depends on configuration	
1	ESC configuration area loaded from EEPROM: 0: not loaded 1: loaded	r/-	r/-	0	
2	PDI active: 0: PDI not active 1: PDI active	r/-	r/-		
3	PDI configuration invalid: 0: PDI configuration ok 1: PDI configuration invalid	r/-	r/-		
15:4	Reserved	r/-	r/-		

## 2.28 PDI Configuration (0x0150:0x0153)

The PDI configuration register 0x0150 and the extended PDI configuration registers 0x0152:0x0153 depend on the selected PDI. The Sync/Latch[1:0] PDI configuration register 0x0151 is independent of the selected PDI.

**Table 30: PDI Configuration Register overview**

PDI number	PDI name	Configuration registers	
0x04	Digital I/O	0x0150	0x0152:0x0153
0x05	SPI Slave	0x0150	0x0152:0x0153
0x07	EtherCAT Bridge (port 3)	0x0150	0x0152:0x0153
0x08/0x09	8/16Bit asynchronous Microcontroller	0x0150	0x0152:0x0153
0x0A/0x0B	8/16Bit synchronous Microcontroller	0x0150	0x0152:0x0153
0x80	On-chip bus	0x0150	0x0152:0x0153
<b>Sync/Latch[1:0] PDI Configuration</b>			
-	Sync/Latch PDI Configuration	0x0151	

## 2.28.1 PDI Digital I/O configuration

Table 31: Register PDI Digital I/O configuration (0x0150)

		ESC29	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
0	OUTVALID polarity: 0: Active high 1: Active low	r/-	r/-	IP Core: 0 Others: 0, later EEPROM word 1	
1	OUTVALID mode: 0: Output event signaling 1: Process Data Watchdog trigger (WD_TRIG) signaling on OUTVALID pin (see SyncManager). Output data is updated if watchdog is triggered. Overrides 0x0150[7:6]	r/-	r/-		
2	Unidirectional/Bidirectional mode*: 0: Unidirectional mode: input/output direction of pins configured individually 1: Bidirectional mode: all I/O pins are bidirectional, direction configuration is ignored	r/-	r/-	IP Core: 1 Others: 0, later EEPROM word 1	
3	Watchdog behavior: 0: Outputs are reset immediately after watchdog expires 1: Outputs are reset with next output event that follows watchdog expiration	r/-	r/-	IP Core: 0 Others: 0, later EEPROM word 1	
5:4	Input DATA is sampled at 00: Start of Frame <sup>2</sup> 01: Rising edge of LATCH_IN 10: DC SYNC0 event <sup>2</sup> 11: DC SYNC1 event <sup>2</sup>	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1	
7:6	Output DATA is updated at 00: End of Frame 01: reserved 10: DC SYNC0 event 11: DC SYNC1 event If 0x0150[1]=1, output DATA is updated at Process Data Watchdog trigger event (0x0150[7:6] are ignored)	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1	

\* IP Core: I/O direction depends on configuration, bidirectional mode is not supported.

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

<sup>2</sup> ET1200: LATCH\_IN/SOF reflects Start of Frame (SOF) if input data is sampled with SOF or DC SYNC events.

Table 32: Register PDI Digital I/O extended configuration (0x0152:0x0153)

		ESC20	ET1100	ET1200 [15:8]	IP Core
Bit	Description	ECAT	PDI	Reset Value	
	Digital I/Os are configured in pairs as inputs or outputs: 0: Input 1: Output  NOTE: Reserved in bidirectional mode, set to 0. Configuration bits for unavailable I/Os are reserved, set EEPROM value to 0.				
0	Direction of I/O[1:0]	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 3	
1	Direction of I/O[3:2]

13	Direction of I/O[27:26]				
14	Direction of I/O[29:28]				
15	Direction of I/O[31:30]				

## 2.28.2 PDI SPI Slave Configuration

Table 33: Register PDI SPI Slave Configuration (0x0150)

Bit	Description	ECAT	PDI	Reset Value
1:0	SPI mode: 00: SPI mode 0 01: SPI mode 1 10: SPI mode 2 11: SPI mode 3  NOTE: SPI mode 3 is recommended for Slave Sample Code  NOTE: SPI status flag is not available in SPI modes 0 and 2 with normal data out sample.	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1
3:2	SPI_IRQ output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)	r/-	r/-	
4	SPI_SEL polarity: 0: Active low 1: Active high	r/-	r/-	
5	Data Out sample mode: 0: Normal sample (SPI_DO and SPI_DI are sampled at the same SPI_CLK edge) 1: Late sample (SPI_DO and SPI_DI are sampled at different SPI_CLK edges)	r/-	r/-	
7:6	Reserved, set EEPROM value to 0	r/-	r/-	

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

Table 34: Register PDI SPI Slave extended configuration (0x0152:0x0153)

Bit	Description	ECAT	PDI	Reset Value
15:0	Reserved, set EEPROM value to 0	r/-	r/-	IP Core: 0 Others: 0, later EEPROM word 3

## 2.28.3 PDI 8/16Bit asynchronous Microcontroller configuration

Table 35: Register PDI asynchronous Microcontroller Configuration (0x0150)

		ESC20 [7:4]	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
1:0	BUSY output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)  NOTE: Push-Pull: no CS → not BUSY (driven) Open Drain/Source: no CS → BUSY open	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1	
3:2	IRQ output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)	r/-	r/-		
4	BHE/Byte Enable polarity: 0: Active low 1: Active high	r/-	r/-		
5	Reserved, set EEPROM value to 0	r/-	r/-		
6	Reserved, set EEPROM value to 0	r/-	r/-	IP Core: 0 Others: 0, later EEPROM word 1	
7	RD Polarity: 0: Active low 1: Active high	r/-	r/-		

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

Table 36: Register PDI Asynchronous Microcontroller extended Configuration (0x0152:0x0153)

		ESC20	ET1100 [15:1]	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
0	Read BUSY delay: 0: Normal read BUSY output 1: Delayed read BUSY output	r/-	r/-	IP Core: 0 Others: 0, later EEPROM word 3	
1	Perform internal write at: 0: End of write access 1: Beginning of write access	r/-	r/-		
15:2	Reserved, set EEPROM value to 0	r/-	r/-		

## 2.28.4 PDI 8/16Bit synchronous Microcontroller configuration

Table 37: Register PDI Synchronous Microcontroller Configuration (0x0150)

		ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value	
1:0	TA output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)  NOTE: Push-Pull: no CS → no TA (driven) Open Drain/Source: no CS → TA open	r/-	r/-	0, later EEPROM word 1	
3:2	IRQ output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)	r/-	r/-		
4	BHE/Byte Enable polarity: 0: Active low 1: Active high	r/-	r/-		
5	ADR(0) polarity: 0: Active high 1: Active low	r/-	r/-		
6	Byte access mode: 0: BHE or Byte Enable mode 1: Transfer Size mode	r/-	r/-		
7	TS Polarity: 0: Active low 1: Active high	r/-	r/-		

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

Table 38: Register PDI Synchronous Microcontroller extended Configuration (0x0152:0x0153)

		ESC20	ET1100	ET1200	IP-Core
			[7:0]		
Bit	Description	ECAT	PDI	Reset Value	
7:0	Reserved, set EEPROM value to 0	r/-	r/-	0, later EEPROM word 3	
8	Write data valid: 0: Write data valid one clock cycle after CS 1: Write data valid together with CS	r/-	r/-		
9	Read mode: 0: Use Byte Selects for read accesses 1: Ignore Byte Selects for read accesses, always read full PDI width	r/-	r/-		
10	CS mode: 0: Sample CS with rising edge of CPU_CLK 1: Sample CS with falling edge of CPU_CLK	r/-	r/-		
11	TA/IRQ mode: 0: Update TA/IRQ with rising edge of CPU_CLK 1: Update TA/IRQ with falling edge of CPU_CLK	r/-	r/-		
15:12	Reserved, set EEPROM value to 0	r/-	r/-		

## 2.28.5 EtherCAT Bridge (port 3)

Table 39: Register EtherCAT Bridge configuration (0x0150)

		ESC20	ET1100	ET1200	IP-Core
				{4}	
Bit	Description	ECAT	PDI	Reset Value	
0	Bridge port physical layer: 0: EBUS 1: MII	r/-	r/-	0, later EEPROM word 1	
1	Initial port state: 0: Always closed (0x0100[15:14]=11) 1: Auto (0x0100[15:14]=00)	r/-	r/-		
7:2	Reserved, set EEPROM value to 0	r/-	r/-		

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

Table 40: Register EtherCAT Bridge extended configuration (0x0152:0x0153)

		ESC20	ET1100	ET1200	IP-Core
				{15:8}	
Bit	Description	ECAT	PDI	Reset Value	
15:0	Reserved, set EEPROM value to 0	r/-	r/-	0, later EEPROM word 3	

## 2.28.6 PDI On-chip bus configuration

Table 41: Register PDI On-chip bus configuration (0x0150)

					ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value				
4:0	On-chip bus clock: 0: asynchronous 1-31: synchronous multiplication factor (N * 25 MHz)	r/-	r/-	IP Core: Depends on configuration				
7:5	On-chip bus: 000: Intel® Avalon® 001: AXI® 010: Xilinx® PLB v4.6 100: Xilinx OPB others: reserved	r/-	r/-					

Table Register Sync/Latch[1:0] PDI Configuration (0x0151) moved to chapter 2.28.7

Table 42: Register PDI On-chip bus extended configuration (0x0152:0x0153)

					ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value				
1:0	Read prefetch size (in cycles of PDI width): 0: 4 cycles 1: 1 cycle (typical) 2: 2 cycles 3: Reserved	r/-	r/-	IP Core: Depends on configuration				
7:2	Reserved	r/-	r/-					
10:8	On-chip bus sub-type for AXI: 000: AXI3 001: AXI4 010: AXI4 LITE others: reserved	r/-	r/-					
15:11	Reserved	r/-	r/-					

## 2.28.7 Sync/Latch[1:0] PDI Configuration

Table 43: Register Sync/Latch[1:0] PDI Configuration (0x0151)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
1:0	SYNC0 output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)	r/-	r/-	IP Core: 10 Others: 00, later EEPROM word 1	
2	SYNC0/LATCH0 configuration*: 0: LATCH0 Input 1: SYNC0 Output	r/-	r/-	IP Core: 1 Others: 0, later EEPROM word 1	
3	SYNC0 mapped to AL Event Request register 0x0220[2]: 0: Disabled 1: Enabled	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1	
5:4	SYNC1 output driver/polarity: 00: Push-Pull active low 01: Open Drain (active low) 10: Push-Pull active high 11: Open Source (active high)	r/-	r/-	IP Core: 10 Others: 00, later EEPROM word 1	
6	SYNC1/LATCH1 configuration*: 0: LATCH1 input 1: SYNC1 output	r/-	r/-	IP Core: 1 Others: 0, later EEPROM word 1	
7	SYNC1 mapped to AL Event Request register 0x0220[3]: 0: Disabled 1: Enabled	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 1	

\* The IP Core has concurrent SYNC[1:0] outputs and LATCH[1:0] inputs, independent of this configuration.

## 2.29 ECAT Event Mask (0x0200:0x0201)

Table 44: Register ECAT Event Mask (0x0200:0x0201)

		ESC20	ET1100	ET1200	IP Core write config. V2.4.0/ V2.04a writable
Bit	Description	ECAT	PDI	Reset Value	
15:0	ECAT Event masking of the ECAT Event Request Events for mapping into ECAT event field of EtherCAT frames: 0: Corresponding ECAT Event Request register bit is not mapped 1: Corresponding ECAT Event Request register bit is mapped	r/w	r/-	0	

## 2.30 PDI AL Event Mask (0x0204:0x0207)

Table 45: Register PDI AL Event Mask (0x0204:0x0207)

		ESC20	ET1100	ET1200	IP Core write config.
Bit	Description	ECAT	PDI	Reset Value	
31:0	AL Event masking of the AL Event Request register Events for mapping to PDI IRQ signal: 0: Corresponding AL Event Request register bit is not mapped 1: Corresponding AL Event Request register bit is mapped	r/-	r/w	0x00FF:0xFF0F	

## 2.31 ECAT Event Request (0x0210:0x0211)

Table 46: Register ECAT Event Request (0x0210:0x0211)

Bit	Description	ESC20			Reset Value
		ECAT	PDI	ET1100 ET1200 IP Core	
0	DC Latch event: 0: No change on DC Latch Inputs 1: At least one change on DC Latch Inputs (Bit is cleared by reading DC Latch event times from ECAT for ECAT-controlled Latch Units, so that Latch 0/1 Status 0x09AE:0x09AF indicates no event)	r/-	r/-		0
1	Reserved	r/-	r/-		0
2	DL Status event: 0: No change in DL Status 1: DL Status change (Bit is cleared by reading out DL Status 0x0110:0x0111 from ECAT)	r/-	r/-		0
3	AL Status event: 0: No change in AL Status 1: AL Status change (Bit is cleared by reading out AL Status 0x0130:0x0131 from ECAT)	r/-	r/-		0
4	Mirrors values of each SyncManager Status: 0: No Sync Channel 0 event 1: Sync Channel 0 event pending 0: No Sync Channel 1 event 1: Sync Channel 1 event pending ... 0: No Sync Channel 7 event 1: Sync Channel 7 event pending	r/-	r/-		0
5					
...					
11					
15:12	Reserved	r/-	r/-		0

## 2.32 AL Event Request (0x0220:0x0223)

Table 47: Register AL Event Request (0x0220:0x0223)

		ESC20 [6:4]	ET1100 [6:5]	ET1200 [6:5]	IP Core [5:4] V2.0.0/ V2.00a; [6] V2.3.0/ V2.03a
Bit	Description	ECAT	PDI	Reset Value	
0	AL Control event: 0: No AL Control Register change 1: AL Control Register has been written <sup>3</sup> (Bit is cleared by reading AL Control register 0x0120:0x0121 from PDI)	r/-	r/-	0	
1	DC Latch event: 0: No change on DC Latch Inputs 1: At least one change on DC Latch Inputs (Bit is cleared by reading DC Latch event times from PDI, so that Latch 0/1 Status 0x09AE:0x09AF indicates no event. Available if Latch Unit is PDI-controlled)	r/-	r/-	0	
2	State of DC SYNC0 (if register 0x0151[3]=1): (Bit is cleared by reading SYNC0 status 0x098E from PDI, use only in Acknowledge mode)	r/-	r/-	0	
3	State of DC SYNC1 (if register 0x0151[7]=1): (Bit is cleared by reading of SYNC1 status 0x098F from PDI, use only in Acknowledge mode)	r/-	r/-	0	
4	SyncManager activation register (SyncManager register offset 0x6) changed: 0: No change in any SyncManager 1: At least one SyncManager changed (Bit is cleared by reading SyncManager Activation registers 0x0806 etc. from PDI)	r/-	r/-	0	
5	EEPROM Emulation: 0: No command pending 1: EEPROM command pending (Bit is cleared by acknowledging the command in EEPROM Control/Status register 0x0502:0x0503[10:8] from PDI)	r/-	r/-	0	
6	Watchdog Process Data: 0: Has not expired 1: Has expired (Bit is cleared by reading Watchdog Status Process Data 0x0440 from PDI)	r/-	r/-	0	
7	Reserved	r/-	r/-	0	

<sup>3</sup> AL control event is only generated if PDI emulation is turned off (PDI Control register 0x0140.8=0)

Bit	Description	ECAT	PDI	Reset Value
	SyncManager interrupts (SyncManager register offset 0x5, bit [0] or [1]):	r/-	r/-	0
8	0: No SyncManager 0 interrupt 1: SyncManager 0 interrupt pending			
9	0: No SyncManager 1 interrupt 1: SyncManager 1 interrupt pending			
....	...			
23	0: No SyncManager 15 interrupt 1: SyncManager 15 interrupt pending			
31:24	Reserved	r/-	r/-	0

### 2.33 RX Error Counter (0x0300:0x0307)

Errors are only counted if the corresponding port is enabled.

**Table 48: Register RX Error Counter Port y (0x0300+y\*2:0x0301+y\*2)**

Bit	Description	ESC20			IP Core
		ECAT	PDI	Reset Value	
7:0	Invalid frame counter of Port y (counting is stopped when 0xFF is reached).	r/ w(clr)	r/-	0	
15:8	RX Error counter of Port y (counting is stopped when 0xFF is reached).	r/ w(clr)	r/-	0	

NOTE: Error Counters 0x0300-0x030B are cleared if one of the implemented RX Error counters 0x0300-0x030B is written (preferably 0x0300). Write value is ignored (write 0). Errors are only counted if the loop of the port is open.

### 2.34 Forwarded RX Error Counter (0x0308:0x030B)

**Table 49: Register Forwarded RX Error Counter Port y (0x0308+y)**

Bit	Description	ESC20			IP Core
		ECAT	PDI	Reset Value	
7:0	Forwarded error counter of Port y (counting is stopped when 0xFF is reached).	r/ w(clr)	r/-	0	

NOTE: Error Counters 0x0300-0x030B are cleared if one of the implemented RX Error counters 0x0300-0x030B is written (preferably 0x0300). Write value is ignored (write 0). Errors are only counted if the loop of the port is open.

### 2.35 ECAT Processing Unit Error Counter (0x030C)

**Table 50: Register ECAT Processing Unit Error Counter (0x030C)**

Bit	Description	ESC20			IP Core
		ECAT	PDI	Reset Value	
7:0	ECAT Processing Unit error counter (counting is stopped when 0xFF is reached). Counts errors of frames passing the Processing Unit.	r/ w(clr)	r/-	0	

NOTE: Error Counter 0x030C is cleared if error counter 0x030C is written. Write value is ignored (write 0).

## 2.36 PDI Error Counter (0x030D)

Table 51: Register PDI Error Counter (0x030D)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
7:0	PDI Error counter (counting is stopped when 0xFF is reached). Counts if a PDI access has an interface error.	r/ w(clr)	r/-	0	

NOTE: Error Counter 0x030D and Error Code 0x030E are cleared if error counter 0x030D is written. Write value is ignored (write 0).

## 2.37 PDI Error Code (0x030E)

### 2.37.1 SPI PDI Error Code

Table 52: Register SPI PDI Error Code (0x030E)

		ESC20	ET1100	ET1200	IP Core
					V2.3.0/ V2.03a
Bit	Description	ECAT	PDI	Reset Value	
	Reasons for last PDI Error	r/-	r/-	0	
2:0	Number of SPI clock cycles of whole access (modulo 8) causing PDI Error				
3	Busy violation during read access: 0: no error 1: error detected				
4	Read termination missing: 0: no error 1: error detected				
5	Access continued after read termination byte 0: no error 1: error detected				
7:6	SPI command CMD[2:1] of access causing PDI Error.				

NOTE: Error Counter 0x030D and Error Code 0x030E are cleared if error counter 0x030D is written. Write value is ignored (write 0).

## 2.37.2 Asynchronous/Synchronous Microcontroller PDI Error Code

Table 53: Register Microcontroller PDI Error Code (0x030E)

		ESC20	ET1100	ET1200	IP Core V2.3.0/ V2.03a
Bit	Description	ECAT	PDI	Reset Value	
	Reasons for last PDI Error	r/-	r/-	0	
0	Busy violation during read access 0: no error 1: error detected				
1	Busy violation during write access 0: no error 1: error detected				
2	Addressing error for a read access (odd address without BHE) 0: no error 1: error detected				
3	Addressing error for a write access (odd address without BHE) 0: no error 1: error detected				
7:4	reserved				

NOTE: Error Counter 0x030D and Error Code 0x030E are cleared if error counter 0x030D is written. Write value is ignored (write 0).

## 2.38 Lost Link Counter (0x0310:0x0313)

Table 54: Register Lost Link Counter Port y (0x0310+y)

Bit	Description	ESC20			ET1100		ET1200		IP Core	
		ECAT	PDI	Reset Value						
7:0	Lost Link counter of Port y (counting is stopped when 0xff is reached). Counts only if port is open and loop is Auto.	r/ w(clr)	r/-	0						

NOTE: Lost Link Counters 0x0310-0x0313 are cleared if one of the implemented Lost Link Counters 0x0310-0x0313 is written (preferably 0x0310). Write value is ignored (write 0).

### 2.39 Watchdog Divider (0x0400:0x0401)

Table 55: Register Watchdog Divider (0x0400:0x0401)

		ESC20	ET1100	ET1200	IP Core
					write config.
Bit	Description	ECAT	PDI	Reset Value	
15:0	Watchdog divider: Number of 25 MHz ticks (minus 2) that represent the basic watchdog increment. (Default value is 100µs = 2498)	r/w	r/-	0x09C2	

### 2.40 Watchdog Time PDI (0x0410:0x0411)

Table 56: Register Watchdog Time PDI (0x0410:0x0411)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
15:0	Watchdog Time PDI: number of basic watchdog increments (Default value with Watchdog divider 100µs means 100ms Watchdog)	r/w	r/-	0x03E8	

Watchdog is disabled if Watchdog time is set to 0x0000. Watchdog starts counting again with every PDI access.

### 2.41 Watchdog Time Process Data (0x0420:0x0421)

Table 57: Register Watchdog Time Process Data (0x0420:0x0421)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
15:0	Watchdog Time Process Data: number of basic watchdog increments (Default value with Watchdog divider 100µs means 100ms Watchdog)	r/w	r/-	0x03E8	

There is one Watchdog for all SyncManagers. Watchdog is disabled if Watchdog time is set to 0x0000. Watchdog starts counting again with every write access to SyncManagers with Watchdog Trigger Enable Bit set.

## 2.42 Watchdog Status Process Data (0x0440:0x0441)

Table 58: Register Watchdog Status Process Data (0x0440:0x0441)

		ESC20	ET1100	ET1200	IP Core
		(w-ack)	(w-ack)	(w-ack)	
Bit	Description	ECAT	PDI	Reset Value	
0	Watchdog Status of Process Data (triggered by SyncManagers) 0: Watchdog Process Data expired 1: Watchdog Process Data is active or disabled	r/-	r/ (w ack)*	0	
15:1	Reserved	r/-	r/ (w ack)*	0	

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI clears AL Event Request 0x0220[6]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI clears AL Event Request 0x0220[6]. Writing to this register from PDI is possible; write value is ignored (write 0).

## 2.43 Watchdog Counter Process Data (0x0442)

Table 59: Register Watchdog Counter Process Data (0x0442)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
7:0	Watchdog Counter Process Data (counting is stopped when 0xFF is reached). Counts if Process Data Watchdog expires.	r/ w(clr)	r/-	0	

NOTE: Watchdog Counters 0x0442-0x0443 are cleared if one of the Watchdog Counters 0x0442-0x0443 is written. Write value is ignored (write 0).

## 2.44 Watchdog Counter PDI (0x0443)

Table 60: Register Watchdog Counter PDI (0x0443)

			ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value		
7:0	Watchdog PDI counter (counting is stopped when 0xFF is reached). Counts if PDI Watchdog expires.	r/ w(clr)	r/-	0		

NOTE: Watchdog Counters 0x0442-0x0443 are cleared if one of the Watchdog Counters 0x0442-0x0443 is written. Write value is ignored (write 0).

## 2.45 SII EEPROM Interface (0x0500:0x050F)

Table 61: SII EEPROM Interface Register overview

Register Address	Length (Byte)	Description
0x0500	1	EEPROM Configuration
0x0501	1	EEPROM PDI Access State
0x0502:0x0503	2	EEPROM Control/Status
0x0504:0x0507	4	EEPROM Address
0x0508:0x050F	4/8	EEPROM Data

EtherCAT controls the SII EEPROM interface if EEPROM configuration register 0x0500[0]=0 and EEPROM PDI Access register 0x0501[0]=0, otherwise PDI controls the EEPROM interface.

In EEPROM emulation mode, the PDI executes pending EEPROM commands. The PDI has access to some registers while the EEPROM Interface is busy.

Table 62: Register EEPROM Configuration (0x0500)

Bit	Description	ESC20 ET1100 ET1200 IP Core			
		ECAT	PDI	Reset Value	
0	EEPROM control is offered to PDI: 0: no 1: yes (PDI has EEPROM control)	r/w	r/-	0	
1	Force ECAT access: 0: Do not change Bit 0x0501[0] 1: Reset Bit 0x0501[0] to 0	r/w	r/-	0	
7:2	Reserved, write 0	r/-	r/-	0	

Table 63: Register EEPROM PDI Access State (0x0501)

Bit	Description	ESC20 ET1100 ET1200 IP Core			
		ECAT	PDI	Reset Value	
0	Access to EEPROM: 0: PDI releases EEPROM access 1: PDI takes EEPROM access (PDI has EEPROM control)	r/-	r/(w)	0	
7:1	Reserved, write 0	r/-	r/-	0	

NOTE: r/(w): write access is only possible if (0x0500[0]=1 or 0x0501[0]=1) and 0x0500[1]=0.

Table 64: Register EEPROM Control/Status (0x0502:0x0503)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		[7]			
Bit	Description	ECAT	PDI	Reset Value	
0	ECAT write enable*2: 0: Write requests are disabled 1: Write requests are enabled This bit is always 1 if PDI has EEPROM control.	r/(w)	r/-	0	
4:1	Reserved, write 0	r/-	r/-	0	
5	EEPROM emulation: 0: Normal operation (I <sup>2</sup> C interface used) 1: PDI emulates EEPROM (I <sup>2</sup> C not used)	r/-	r/-	IP Core: depends on configuration Others: 0	
6	Supported number of EEPROM read bytes: 0: 4 Bytes 1: 8 Bytes	r/-	r/-	ET1100: 1 ET1200: 1 Others: 0	
7	Selected EEPROM Algorithm: 0: 1 address byte (1Kbit – 16Kbit EEPROMs) 1: 2 address bytes (32Kbit – 4 Mbit EEPROMs)	r/-	r/-	ESC20: 0*1 IP Core: depending on PROM_SIZE and features Others: PIN EEPROM size	
10:8	Command register*2: Write: Initiate command. Read: Currently executed command Commands: 000: No command/EEPROM idle (clear error bits) 001: Read 010: Write 100: Reload Others: Reserved/invalid commands (do not issue) EEPROM emulation only: after execution, PDI writes command value to indicate operation is ready.	r/(w)	r/(w) r/[w]	0	
11	Checksum Error in ESC Configuration Area: 0: Checksum ok 1: Checksum error  EEPROM emulation only: PDI writes 1 if a CRC failure has occurred for a reload command.	r/-	r/- r/[w]	0	
12	EEPROM loading status: 0: EEPROM loaded, device information ok 1: EEPROM not loaded, device information not available (EEPROM loading in progress or finished with a failure)	r/-	r/-	0	
13	Error Acknowledge/Command*3: 0: No error 1: Missing EEPROM acknowledge or invalid command  EEPROM emulation only: PDI writes 1 if a temporary failure has occurred.	r/-	r/- r/[w]	0	
14	Error Write Enable*3: 0: No error 1: Write Command without Write enable	r/-	r/-	0	

Bit	Description	ECAT	PDI	Reset Value
15	Busy: 0: EEPROM Interface is idle 1: EEPROM Interface is busy	r/-	r/-	0

NOTE: r/(w): write access depends upon the assignment of the EEPROM interface (ECAT/PDI). Write access is blocked if EEPROM interface is busy (0x0502[15]=1).

NOTE: r/[w]: EEPROM emulation only: write access is possible if EEPROM interface is busy (0x0502[15]=1). PDI acknowledges pending commands by writing a 1 into the corresponding command register bits (0x0502[10:8]). General/temporary errors can be indicated by writing a 1 into the error bit 0x0502[13], CRC errors for Reload command can be indicated by writing a 1 into the error bit 0x0502[11]. Acknowledging clears AL Event Request 0x0220[5].

\*1 ESC20: configurable with pin EEPROM SIZE, but not readable in this register.

\*2 Write Enable bit 0 is self-clearing at the SOF of the next frame, Command bits [10:8] are self-clearing after the command is executed (EEPROM Busy ends). Writing "000" to the command register will also clear the error bits [14:13]. Command bits [10:8] are ignored if Error Acknowledge/Command is pending (bit 13).

\*3 Error bits are cleared by writing "000" (or any valid command) to Command Register Bits [10:8].

**Table 65: Register EEPROM Address (0x0504:0x0507)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	EEPROM Address 0: First word (= 16 bit) 1: Second word ... Actually used EEPROM Address bits: [9:0]: EEPROM size up to 16 Kbit [17:0]: EEPROM size 32 Kbit – 4 Mbit [31:0]: EEPROM Emulation	r/(w)	r/(w)	0	

NOTE: r/(w): write access depends upon the assignment of the EEPROM interface (ECAT/PDI). Write access is blocked if EEPROM interface is busy (0x0502[15]=1).

**Table 66: Register EEPROM Data (0x0508:0x050F [0x0508:0x050B])**

		ESC20	ET1100	ET1200	IP Core
		[63:32]			[63:32]
Bit	Description	ECAT	PDI	Reset Value	
15:0	EEPROM Write data (data to be written to EEPROM) or EEPROM Read data (data read from EEPROM, lower bytes)	r/(w)	r/(w) r/[w]	0	
63:16	EEPROM Read data (data read from EEPROM, higher bytes)	r/-	r/- r/[w]		

NOTE: r/(w): write access depends upon the assignment of the EEPROM interface (ECAT/PDI). Write access is blocked if EEPROM interface is busy (0x0502[15]=1).

NOTE: r/[w]: write access for EEPROM emulation if read or reload command is pending. See the following information for further details:

### 2.45.1 EEPROM emulation with IP Core

Write access to the EEPROM Data register 0x0508:0x050B is possible if the EEPROM interface is busy (0x0502[15]=1). PDI places EEPROM read data in this register before the pending EEPROM Read command is acknowledged (writing to 0x0502[10:8]). For a Reload command, fill the EEPROM Data register with the values shown in the following table before acknowledging the command. These values are automatically transferred to the designated registers after the Reload command is acknowledged:

**Table 67: Register EEPROM Data for EEPROM Emulation Reload IP Core (0x0508:0x050F)**

					ESC20	ET1100	ET1200	IP Core [27:21] V2.4.3/ V2.04d
Bit	Description	ECAT	PDI	Reset Value				
15:0	Configured Station Alias (reloaded into 0x0012[15:0])	r/-	r/[w]	0				
16	Enhanced Link Detection for all ports (reloaded into 0x0141[1])	r/-	r/[w]	0				
20:17	Enhanced Link Detection for individual ports (reloaded into 0x0141[7:4])	r/-	r/[w]	0				
24:21	ESC DL configuration (loaded into register 0x0100[23:20])  NOTE: This value is only taken over at the first EEPROM loading	r/-	r/[w]	0				
27:25	FIFO Size reduction (loaded into ESC DL Control register 0x0100:0x0103 [18:16]): 000: FIFO Size set to 7 001: FIFO Size set to 6 010: FIFO Size set to 5 011: FIFO Size set to 4 100: FIFO Size set to 3 101: FIFO Size set to 2 110: FIFO Size set to 1 111: FIFO Size set to 0  NOTE: This value sets the ESC DL control register only at the first EEPROM loading	r/-	r/[w]	0				
31:28	Reserved, write 0	r/-	r/[w]	0				

NOTE: r/[w]: write access for EEPROM emulation if read or reload command is pending.

**2.46 MII Management Interface (0x0510:0x0515)****Table 68: MII Management Interface Register Overview**

Register Address	Length (Byte)	Description
0x0510:0x0511	2	MI Management Control/Status
0x0512	1	PHY Address
0x0513	1	PHY Register Address
0x0514:0x0515	2	PHY Data
0x0516	1	MI Management ECAT Access State
0x0517	1	MI Management PDI Access State
0x0518:0x051B	4	PHY Port Status

ECAT controls the MII management interface if MII Management PDI Access register 0x0517[0]=0 or if 0x0517 is not available, otherwise PDI controls the MII management interface.

Exception for ET1100: PDI controls the MII management interface if Transparent Mode is enabled.

Table 69: Register MII Management Control/Status (0x0510:0x0511)

Bit	Description	ECAT	PDI	Reset Value
0	Write enable*: 0: Write disabled 1: Write enabled This bit is always 1 if PDI has MI control. ET1100-0000/-0001 exception: Bit is not always 1 if PDI has MI control, and bit is writable by PDI.	r/(w)	r/-	0
1	Management Interface can be controlled by PDI (registers 0x0516-0x0517): 0: Only ECAT control 1: PDI control possible	r/-	r/-	IP Core since V2.0.0/V2.00a: 1 Others: 0
2	MI link detection and configuration: 0: Disabled for all ports 1: Enabled for at least one MII port, refer to PHY Port Status (0x0518 ff.) for details	r/-	r/-	IP Core: Depends on configuration Others: 0
7:3	PHY address of port 0 IP Core since V3.0.0/3.00c: PHY address of port 0-3 depending on 0x0512[7].	r/-	r/-	ET1100, ET1200: PHYAD_OFF for bit 7 IP Core: Depends on configuration Others: 0
9:8	Command register*: Write: Initiate command. Read: Currently executed command Commands: 00: No command/MI idle (clear error bits) 01: Read 10: Write 11: Reserved/invalid command (do not issue)	r/(w)	r/(w)	0
12:10	Reserved, write 0	r/-	r/-	0
13	Read error: 0: No read error 1: Read error occurred (PHY or register not available) Cleared by writing to register 0x0511.	r/(w)	r/(w)	0
14	Command error: 0: Last Command was successful 1: Invalid command or write command without Write Enable Cleared by executing a valid command or by writing "00" to Command register bits [9:8].	r/-	r/-	0
15	Busy: 0: MII Management Interface is idle 1: MII Management Interface is busy	r/-	r/-	0

NOTE: r/ (w): write access depends on assignment of MI (ECAT/PDI). Write access is blocked if Management interface is busy (0x0510[15]=1).

\* Write enable bit 0 is self-clearing at the SOF of the next frame, Command bits [9:8] are self-clearing after the command is executed (Busy ends). Writing "00" to the command register will also clear the error bits [14:13]. The Command bits are cleared after the command is executed.

Table 70: Register PHY Address (0x0512)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		[7]	[7]	[7]	[7] V3.0.0/ V3.00c
Bit	Description	ECAT	PDI	Reset Value	
4:0	PHY Address	r/(w)	r/(w)	0	
6:5	Reserved, write 0	r/-	r/-	0	
7	Show configured PHY address of port 0-3 in register 0x0510[7:3]. This is used if the PHY addresses are not consecutive. 0: Register 0x0510[7:3] shows PHY address of port 0 (this is also the PHY address offset, if the PHY addresses are consecutive) 1: Register 0x0510[7:3] shows PHY address of port 0x0512[4:0] (valid values 0-3)	r/(w)	r/(w)	0	

NOTE: r/(w): write access depends on assignment of MI (ECAT/PDI). Write access is blocked if Management interface is busy (0x0510[15]=1).

Table 71: Register PHY Register Address (0x0513)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
4:0	Address of PHY Register that shall be read/written	r/(w)	r/(w)	0	
7:5	Reserved, write 0	r/-	r/-	0	

NOTE: r/(w): write access depends on assignment of MI (ECAT/PDI). Write access is blocked if Management interface is busy (0x0510[15]=1).

Table 72: Register PHY Data (0x0514:0x0515)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
15:0	PHY Read/Write Data	r/(w)	r/(w)	0	

NOTE: r/(w): write access depends on assignment of MI (ECAT/PDI). Write access is blocked if Management interface is busy (0x0510[15]=1).

Table 73: Register MII Management ECAT Access State (0x0516)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Access to MII management: 0: ECAT enables PDI takeover of MII management interface 1: ECAT claims exclusive access to MII management interface	r/(w)	r/-	0	
7:1	Reserved, write 0	r/-	r/-	0	

NOTE: r/(w): write access is only possible if 0x0517[0]=0.

Table 74: Register MII Management PDI Access State (0x0517)

					ESC20	ET1100	ET1200	IP Core
								V2.0.0/ V2.00a
Bit	Description	ECAT	PDI	Reset Value				
0	Access to MII management: 0: ECAT has access to MII management 1: PDI has access to MII management	r/-	r/(w)	0				
1	Force PDI Access State: 0: Do not change Bit 0x0517[0] 1: Reset Bit 0x0517[0] to 0	r/w	r/-	0				
7:2	Reserved, write 0	r/-	r/-	0				

NOTE: r/(w): assigning access to PDI (bit 0 = 1) is only possible if 0x0516[0]=0 and 0x0517[1]=0. The SII EEPROM must be loaded (0x0110[0]=1) as well for IP Cores before V3.0.0/V3.00c.

Table 75: Register PHY Port y (port number y=0 to 3) Status (0x0518+y)

					ESC20	ET1100	ET1200	IP Core
								V2.0.0/ V2.00a; [5] V2.0.2/ V2.02a

1	Link status (100 Mbit/s, Full Duplex, Auto negotiation): 0: No link 1: Link detected	r/-	r/-	0				
2	Link status error: 0: No error 1: Link error, link inhibited	r/-	r/-	0				
3	Read error: 0: No read error occurred 1: A read error has occurred Cleared by writing any value to at least one of the PHY Port y Status registers.	r/(w/clr)	r/(w/clr)	0				
4	Link partner error: 0: No error detected 1: Link partner error	r/-	r/-	0				
5	PHY configuration updated: 0: No update 1: PHY configuration was updated Cleared by writing any value to at least one of the PHY Port y Status registers.	r/(w/clr)	r/(w/clr)	0				
7:6	Reserved	r/-	r/-	0				

NOTE: r/(w): write access depends on assignment of MI (ECAT/PDI).

## 2.47 FMMU (0x0600:0x06FF)

Each FMMU entry is described in 16 Bytes from 0x0600:0x060F to 0x06F0:0x06FF. Throughout this chapter, y is the FMMU index (y=0x0 to 0xF).

**Table 76: FMMU Register overview**

Register Address Offset	Length (Byte)	Description
+0x0:0x3	4	Logical Start Address
+0x4:0x5	2	Length
+0x6	1	Logical Start bit
+0x7	1	Logical Stop bit
+0x8:0x9	2	Physical Start Address
+0xA	1	Physical Start bit

3:2	Direction: 00: Read: ECAT read access, PDI write access. 01: Write: ECAT write access, PDI read access. 10: Reserved 11: Reserved	r/(w)	r/-	00	
4	Interrupt in ECAT Event Request Register: 0: Disabled 1: Enabled	r/(w)	r/-	0	
5	Interrupt in AL Event Request Register: 0: Disabled 1: Enabled	r/(w)	r/-	0	
6	Watchdog Trigger Enable: 0: Disabled 1: Enabled	r/(w)	r/-	0	
7	Reserved, write 0	r/-	r/-	0	

NOTE r/(w): Register can only be written if SyncManager is disabled (+0x6[0] = 0).

Table 90: Register Status Register SyncManager y (0x0805+y\*8)

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					[7:6]	[7:6]	[7:6]	[7:6] V2.3.0/ V2.03a
0	Interrupt Write: 1: Interrupt after buffer was completely and successfully written 0: Interrupt cleared after first byte of buffer was read  NOTE: This interrupt is signalled to the reading side if enabled in the SM Control register.	r/-	r/-	0				
1	Interrupt Read: 1: Interrupt after buffer was completely and successfully read 0: Interrupt cleared after first byte of buffer was written  NOTE: This interrupt is signalled to the writing side if enabled in the SM Control register.	r/-	r/-	0				
2	Reserved	r/-	r/-	0				
3	Mailbox mode: mailbox status: 0: Mailbox empty 1: Mailbox full Buffered mode: reserved	r/-	r/-	0				
5:4	Buffered mode: buffer status (last written buffer): 00: 1 <sup>st</sup> buffer 01: 2 <sup>nd</sup> buffer 10: 3 <sup>rd</sup> buffer 11: (no buffer written) Mailbox mode: reserved	r/-	r/-	11				
6	Read buffer in use (opened)	r/-	r/-	0				
7	Write buffer in use (opened)	r/-	r/-	0				

Table 91: Register Activate SyncManager y (0x0806+y\*8)

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					[7:6] (w-ack)	(w-ack)	[7:6] (w-ack)	
0	SyncManager Enable/Disable: 0: Disable: Access to Memory without SyncManager control 1: Enable: SyncManager is active and controls Memory area set in configuration	r/w	r/ (w-ack)*	0				
1	Repeat Request: A toggle of Repeat Request means that a mailbox retry is needed (primarily used in conjunction with ECAT Read Mailbox)	r/w	r/-	0				
5:2	Reserved, write 0	r/-	r/-	0				
6	Latch Event ECAT: 0: No 1: Generate Latch event when EtherCAT master issues a buffer exchange	r/w	r/-	0				
7	Latch Event PDI: 0: No 1: Generate Latch events when PDI issues a buffer exchange or when PDI accesses buffer start address	r/w	r/-	0				

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI in all SyncManagers which have changed activation clears AL Event Request 0x0220[4]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing register 0x0806 (SyncManager 0 only) from PDI clears AL Event Request 0x0220[4] for all SyncManagers. Writing to register 0x0806 (not 0x080E+y\*8) from PDI is possible; write value is ignored (write 0).

**Table 92: Register PDI Control SyncManager y (0x0807+y\*8)**

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Deactivate SyncManager: Read: 0: Normal operation, SyncManager activated. 1: SyncManager deactivated and reset. SyncManager locks access to Memory area. Write: 0: Activate SyncManager 1: Request SyncManager deactivation NOTE: Writing 1 is delayed until the end of the frame, which is currently processed.	r/-	r/w	0	
1	Repeat Ack: If this is set to the same value as that set by Repeat Request, the PDI acknowledges the execution of a previous set Repeat request.	r/-	r/w	0	
7:2	Reserved, write 0	r/-	r/-	0	

## 2.49 Distributed Clocks (0x0900:0x09FF)

### 2.49.1 Receive Times

**Table 93: Register Receive Time Port 0 (0x0900:0x0903)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
7:0	<p>Write:</p> <p>A write access to register 0x0900 with BWR or FPWR latches the local time at the beginning of the receive frame (start first bit of preamble) at each port.</p> <p>Write (ESC20, ET1200 exception):</p> <p>A write access latches the local time at the beginning of the receive frame at port 0. It enables the time stamping at the other ports.</p> <p>Read:</p> <p>Local time at the beginning of the last receive frame containing a write access to this register.</p> <p>NOTE: FPWR requires an address match for accessing this register like any FPWR command. All write commands with address match will increment the working counter (e.g., APWR), but they will not trigger receive time latching.</p>	r/w (special function)	r/-	Undefined	
31:8	Local time at the beginning of the last receive frame containing a write access to register 0x0900.	r/-	r/-	Undefined	

NOTE: The time stamps cannot be read in the same frame in which this register was written.

**Table 94: Register Receive Time Port 1 (0x0904:0x0907)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	<p>Local time at the beginning of a frame (start first bit of preamble) received at port 1 containing a BWR or FPWR to register 0x0900.</p> <p>ESC20, ET1200 exception:</p> <p>Local time at the beginning of the first frame received at port 1 after time stamping was enabled. Time stamping is disabled for this port afterwards.</p>	r/-	r/-	Undefined	

**Table 95: Register Receive Time Port 2 (0x0908:0x090B)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Local time at the beginning of a frame (start first bit of preamble) received at port 2 containing a BWR or FPWR to register 0x0900.	r/-	r/-	Undefined	

Table 96: Register Receive Time Port 3 (0x090C:0x090F)

					ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value				
31:0	Local time at the beginning of a frame (start first bit of preamble) received at port 3 containing a BWR or FPWR to register 0x0900. ET1200 exception: Local time at the beginning of the first frame received at port 3 after time stamping was enabled. Time stamping is disabled for this port afterwards.	r/-	r/-	Undefined				

**NOTE:** Register 0x0910:0x0913[0x910:0x0917] is described in the next chapter.

Table 97: Register Receive Time ECAT Processing Unit (0x0918:0x091F)

					ESC20	ET1100	ET1200	IP Core
					[63:32]			[63:32] config.
Bit	Description	ECAT	PDI	Reset Value				
63:0	Local time at the beginning of a frame (start first bit of preamble) received at the ECAT Processing Unit containing a write access to register 0x0900  NOTE: E.g., if port 0 is open, this register reflects the Receive Time Port 0 as a 64 Bit value. Any valid EtherCAT write access to register 0x0900 triggers latching, not only BWR/FPWR commands as with register 0x0900.	r/-	r/-	Undefined				

### 2.49.2 Time Loop Control Unit

Time Loop Control unit is usually assigned to ECAT. Write access to Time Loop Control registers by PDI (and not ECAT) is only possible with explicit IP Core configuration.

**Table 98: Register System Time (0x0910:0x0913 [0x0910:0x0917])**

		ESC20 [63:32]	ET1100	ET1200	IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value	
63:0	ECAT read access: Local copy of the System Time when the frame passed the reference clock (i.e., including System Time Delay). Time latched at beginning of the frame (Ethernet SOF delimiter)	r	-	0	
63:0	PDI read access: Local copy of the System Time. Time latched when reading first byte (0x0910)	-	r		
31:0	ECAT write access: Written value will be compared with the local copy of the System time. The result is an input to the time control loop.  NOTE: written value will be compared at the end of the frame with the latched (SOF) local copy of the System time if at least the first byte (0x0910) was written.	(w) (special function)	-		
31:0	PDI write access: Written value will be compared with Latch0 Time Positive Edge time. The result is an input to the time control loop.  NOTE: written value will be compared at the end of the access with Latch0 Time Positive Edge (0x09B0:0x09B3) if at least the last byte (0x0913) was written.	-	(w) (special function)		

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled).

**NOTE: Register 0x0918:0x091F is described in the previous chapter.**

**Table 99: Register System Time Offset (0x0920:0x0923 [0x0920:0x0927])**

		ESC20 [63:32]	ET1100	ET1200	IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value	
63:0	Difference between local time and System Time. Offset is added to the local time.	r/(w)	r/(w)	0	

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled). Reset internal system time difference filter and speed counter filter by writing Speed Counter Start (0x0930:0x0931) after changing this value.

**Table 100: Register System Time Delay (0x0928:0x092B)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Delay between Reference Clock and the ESC	r/(w)	r/(w)	0	

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled). Reset internal system time difference filter and speed counter filter by writing Speed Counter Start (0x0930:0x0931) after changing this value.

**Table 101: Register System Time Difference (0x092C:0x092F)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
30:0	Mean difference between local copy of System Time and received System Time values <i>Difference = Received System Time – local copy of System Time</i>	r/-	r/-	0	
31	0: Local copy of System Time less than received System Time 1: Local copy of System Time greater than or equal to received System Time	r/-	r/-	0	

NOTE: Register bits [31:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

**Table 102: Register Speed Counter Start (0x0930:0x0931)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
14:0	Bandwidth for adjustment of local copy of System Time (larger values → smaller bandwidth and smoother adjustment) A write access resets System Time Difference (0x092C:0x092F) and Speed Counter Diff (0x0932:0x0933). Valid values: 0x0080 to 0x3FFF	r/(w)	r/(w)	0x1000	
15	Reserved, write 0	r/-	r/-	0	

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled).

**Table 103: Register Speed Counter Diff (0x0932:0x0933)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
15:0	Representation of the deviation between local clock period and Reference Clock's clock period (representation: two's complement) Range: $\pm(\text{Speed Counter Start} - 0x7F)$	r/-	r/-	0x0000	

NOTE: Calculate the clock deviation after System Time Difference has settled at a low value as follows:

$$\text{Deviation} = \frac{\text{Speed Counter Diff}}{5(\text{Speed Counter Start} + \text{Speed Counter Diff} + 2)(\text{Speed Counter Start} - \text{Speed Counter Diff} + 2)}$$

Table 104: Register System Time Difference Filter Depth (0x0934)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
3:0	Filter depth for averaging the received System Time deviation IP Core since V2.2.0/V2.02a: A write access resets System Time Difference (0x092C:0x092F)	r/(w)	r/(w)	4	
7:4	Reserved, write 0	r/-	r/-	0	

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled).

ET1100, ET1200, ESC20, IP Core before V2.2.0/V2.02a: Reset System Time Difference by writing Speed Counter Start (0x0930:0x0931) after changing this value.

Table 105: Register Speed Counter Filter Depth (0x0935)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
3:0	Filter depth for averaging the clock period deviation IP Core since V2.2.0/V2.02a: A write access resets the internal speed counter filter.	r/(w)	r/(w)	12	
7:4	Reserved, write 0	r/-	r/-	0	

NOTE: Write access to this register depends upon ESC configuration (typically ECAT, PDI only with explicit ESC configuration: System Time PDI-controlled).

ET1100, ET1200, ESC20, IP Core before V2.2.0/V2.02a: Reset internal speed counter filter by writing Speed Counter Start (0x0930:0x0931) after changing this value.

Table 106: Register Receive Time Latch Mode (0x0936)

		ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value	
0	Receive Time Latch Mode: 0: Forwarding mode (used if frames are entering the ESC at port 0 first): Receive time stamps of ports 1-3 are enabled after the write access to 0x0900, so the following frame at ports 1-3 will be time stamped (this is typically the write frame to 0x0900 coming back from the network behind the ESC). 1: Reverse mode (used if frames are entering ESC at port 1-3 first): Receive time stamps of ports 1-3 are immediately taken over from the internal hidden time stamp registers, so the previous frame entering the ESC at ports 1-3 will be time stamped when the write frame to 0x0900 enters port 0 (the previous frame at ports 1-3 is typically the write frame to 0x0900 coming from the master, which will enable time stamping at the ESC once it enters port 0).	r/w	r/-	0	
7:1	Reserved	r/-	r/-	0	

NOTE: There should not be frames traveling around the network before and after the time stamps are taken, otherwise these frames might get time stamped, and not the write frame to 0x0900.

## 2.49.3 Cyclic Unit Control

Table 107: Register Cyclic Unit Control (0x0980)

Bit	Description	ECAT	PDI	Reset Value
0	SYNC out unit control: 0: ECAT-controlled 1: PDI-controlled	r/w	r/-	0
3:1	Reserved, write 0	r/-	r/-	0
4	Latch In unit 0: 0: ECAT-controlled 1: PDI-controlled  NOTE: Latch interrupt is routed to ECAT/PDI depending on this setting. Always 1 (PDI-controlled) if System Time is PDI-controlled.	r/w	r/-	0
5	Latch In unit 1: 0: ECAT-controlled 1: PDI-controlled  NOTE: Latch interrupt is routed to ECAT/PDI depending on this setting	r/w	r/-	0
7:6	Reserved, write 0	r/-	r/-	0

## 2.49.4 SYNC Out Unit

Table 108: Register Activation register (0x0981)

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					[7:3]	[7:3]	[7:3]	[7:3] V2.2.0/ V2.02a
0	Sync Out Unit activation: 0: Deactivated 1: Activated	r/(w)	r/(w)	0				
1	SYNC0 generation: 0: Deactivated 1: SYNC0 pulse is generated	r/(w)	r/(w)	0				
2	SYNC1 generation: 0: Deactivated 1: SYNC1 pulse is generated	r/(w)	r/(w)	0				
3	Auto-activation by writing Start Time Cyclic Operation (0x0990:0x0997): 0: Disabled 1: Auto-activation enabled. 0x0981[0] is set automatically after Start Time is written.	r/(w)	r/(w)	0				
4	Extension of Start Time Cyclic Operation (0x0990:0x0993): 0: No extension 1: Extend 32 bit written Start Time to 64 bit	r/(w)	r/(w)	0				
5	Start Time plausibility check: 0: Disabled. SyncSignal generation if Start Time is reached. 1: Immediate SyncSignal generation if Start Time is outside near future (see 0x0981[6])	r/(w)	r/(w)	0				
6	Near future configuration (approx.): 0: ½ DC width future (2 <sup>31</sup> ns or 2 <sup>63</sup> ns) 1: ~2.1 sec. future (2 <sup>31</sup> ns)	r/(w)	r/(w)	0				
7	SyncSignal debug pulse (Vasily bit): 0: Deactivated 1: Immediately generate one ping only on SYNC0-1 according to 0x0981[2:1] for debugging  This bit is self-clearing, always read 0. All pulses are generated at the same time, the cycle time is ignored. The configured pulse length is used.	r/(w)	r/(w)	0				

NOTE: Write to this register depends upon setting of 0x0980[0].

Table 109: Register Pulse Length of SyncSignals (0x0982:0x983)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
15:0	Pulse length of SyncSignals (in Units of 10ns) 0: Acknowledge mode: SyncSignal will be cleared by reading SYNC[1:0] Status register	r/-	r/-	IP Core: Depends on configuration Others: 0, later EEPROM word 2	

Table 110: Register Activation Status (0x0984)

		ESC20	ET1100	ET1200	IP Core
		[4:3]	[4:3]	[4:3]	V2.2.0/ V2.02a [4:3]
Bit	Description	ECAT	PDI	Reset Value	
0	SYNC0 activation state: 0: First SYNC0 pulse is not pending 1: First SYNC0 pulse is pending	r/-	r/-	0	
1	SYNC1 activation state: 0: First SYNC1 pulse is not pending 1: First SYNC1 pulse is pending	r/-	r/-	0	
2	Start Time Cyclic Operation (0x0990:0x0997) plausibility check result when Sync Out Unit was activated: 0: Start Time was within near future 1: Start Time was out of near future (0x0981[6])	r/-	r/-	0	
7:3	Reserved	r/-	r/-	0	

Table 111: Register SYNC0 Status (0x098E)

		ESC20	ET1100	ET1200	IP Core
		(w-ack)	(w-ack)	(w-ack)	
Bit	Description	ECAT	PDI	Reset Value	
0	SYNC0 state for Acknowledge mode. SYNC0 in Acknowledge mode is cleared by reading this register from PDI, use only in Acknowledge mode	r/-	r/ (w ack)*	0	
7:1	Reserved	r/-	r/ (w ack)*	0	

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI clears AL Event Request 0x0220[2]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI clears AL Event Request 0x0220[2]. Writing to this register from PDI is possible; write value is ignored (write 0).

Table 112: Register SYNC1 Status (0x098F)

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					(w-ack)	(w-ack)	(w-ack)	
0	SYNC1 state for Acknowledge mode. SYNC1 in Acknowledge mode is cleared by reading this register from PDI, use only in Acknowledge mode	r/-	r/ (w ack)*	0				
7:1	Reserved	r/-	r/ (w ack)*	0				

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI clears AL Event Request 0x0220[3]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI clears AL Event Request 0x0220[3]. Writing to this register from PDI is possible; write value is ignored (write 0).

Table 113: Register Start Time Cyclic Operation (0x0990:0x0993 [0x0990:0x0997])

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					[63:32]			[63:32] config.
63:0	Write: Start time (System time) of cyclic operation in ns Read: System time of next SYNC0 pulse in ns	r/(w)	r/(w)	0				

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

Write to this register depends upon setting of 0x0980[0]. Write value is taken over when 0x0981[0] has a transition to 1.

Auto-activation (0x0981[3]=1): 0x0981[0] is set automatically after this register is written.

Extension of Start Time (0x0981[4]=1): upper 32 bits are automatically extended after writing this register if only lower 32 bits are written within one frame.

Table 114: Register Next SYNC1 Pulse (0x0998:0x099B [0x0998:0x099F])

Bit	Description	ECAT	PDI	Reset Value	ESC20	ET1100	ET1200	IP Core
					[63:32]			[63:32] config.
63:0	System time of next SYNC1 pulse in ns	r/-	r/-	0				

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

**Table 115: Register SYNC0 Cycle Time (0x09A0:0x09A3)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Time between two consecutive SYNC0 pulses in ns. 0: Single shot mode, generate only one SYNC0 pulse.	r/(w)	r/(w)	0	

NOTE: Write to this register depends upon setting of 0x0980[0].

**Table 116: Register SYNC1 Cycle Time (0x09A4:0x09A7)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Time between SYNC0 pulse and SYNC1 pulse in ns	r/(w)	r/(w)	0	

NOTE: Write to this register depends upon setting of 0x0980[0].

## 2.49.5 Latch In unit

Table 117: Register Latch0 Control (0x09A8)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Latch0 positive edge: 0: Continuous Latch active 1: Single event (only first event active)	r/(w)	r/(w)	0	
1	Latch0 negative edge: 0: Continuous Latch active 1: Single event (only first event active)	r/(w)	r/(w)	0	
7:2	Reserved, write 0	r/-	r/-	0	

NOTE: Write access depends upon setting of 0x0980[4].

Table 118: Register Latch1 Control (0x09A9)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
0	Latch1 positive edge: 0: Continuous Latch active 1: Single event (only first event active)	r/(w)	r/(w)	0	
1	Latch1 negative edge: 0: Continuous Latch active 1: Single event (only first event active)	r/(w)	r/(w)	0	
7:2	Reserved, write 0	r/-	r/-	0	

NOTE: Write access depends upon setting of 0x0980[5].

Table 119: Register Latch0 Status (0x09AE)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		{2}		{2}	
Bit	Description	ECAT	PDI	Reset Value	
0	Event Latch0 positive edge. 0: Positive edge not detected or continuous mode 1: Positive edge detected in single event mode only. Flag cleared by reading out Latch0 Time Positive Edge.	r/-	r/-	0	
1	Event Latch0 negative edge. 0: Negative edge not detected or continuous mode 1: Negative edge detected in single event mode only. Flag cleared by reading out Latch0 Time Negative Edge.	r/-	r/-	0	
2	Latch0 pin state	r/-	r/-	0	
7:3	Reserved	r/-	r/-	0	

Table 120: Register Latch1 Status (0x09AF)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		{2}		{2}	
Bit	Description	ECAT	PDI	Reset Value	
0	Event Latch1 positive edge. 0: Positive edge not detected or continuous mode 1: Positive edge detected in single event mode only. Flag cleared by reading out Latch1 Time Positive Edge.	r/-	r/-	0	
1	Event Latch1 negative edge. 0: Negative edge not detected or continuous mode 1: Negative edge detected in single event mode only. Flag cleared by reading out Latch1 Time Negative Edge.	r/-	r/-	0	
2	Latch1 pin state	r/-	r/-	0	
7:3	Reserved	r/-	r/-	0	

**Table 121: Register Latch0 Time Positive Edge (0x09B0:0x09B3 [0x09B0:0x09B7])**

		ESC20 [63:32] (w-ack)}	ET1100 (w-ack)}	ET1200 (w-ack)}	IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value	
63:0	System time at the positive edge of the Latch0 signal.	r(ack)/-	r/ (w ack)*	0	

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value. Reading this register from ECAT clears Latch0 Status 0x09AE[0] if 0x0980[4]=0. Writing to this register from ECAT is not possible.

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI if 0x0980[4]=1 clears Latch0 Status 0x09AE[0]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI if 0x0980[4]=1 clears Latch0 Status 0x09AE[0]. Writing to this register from PDI is possible; write value is ignored (write 0).

**Table 122: Register Latch0 Time Negative Edge (0x09B8:0x09BB [0x09B8:0x09BF])**

		ESC20 [63:32] (w-ack)}	ET1100 (w-ack)}	ET1200 (w-ack)}	IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value	
63:0	System time at the negative edge of the Latch0 signal.	r(ack)/-	r/ (w ack)*	0	

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value. Reading this register from ECAT clears Latch0 Status 0x09AE[1] if 0x0980[4]=0. Writing to this register from ECAT is not possible.

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI if 0x0980[4]=1 clears Latch0 Status 0x09AE[1]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI if 0x0980[4]=1 clears Latch0 Status 0x09AE[1]. Writing to this register from PDI is possible; write value is ignored (write 0).

**Table 123: Register Latch1 Time Positive Edge (0x09C0:0x09C3 [0x09C0:0x09C7])**

		<b>ESC20</b> [63:32]	ET1100 (w ack)}	<b>ET1200</b> (w ack)}
				IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value
63:0	System time at the positive edge of the Latch1 signal.	r(ack)/-	r/ (w ack)*	0

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value. Reading this register from ECAT clears Latch0 Status 0x09AF[0] if 0x0980[5]=0. Writing to this register from ECAT is not possible.

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI if 0x0980[5]=1 clears Latch0 Status 0x09AF[0]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI if 0x0980[5]=1 clears Latch0 Status 0x09AF[0]. Writing to this register from PDI is possible; write value is ignored (write 0).

**Table 124: Register Latch1 Time Negative Edge (0x09C8:0x09CB [0x09C8:0x09CF])**

		<b>ESC20</b> [63:32]	ET1100 (w ack)}	<b>ET1200</b> (w ack)}
				IP Core [63:32] config.
Bit	Description	ECAT	PDI	Reset Value
63:0	System time at the negative edge of the Latch1 signal.	r(ack)/-	r/ (w ack)*	0

NOTE: Register bits [63:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value. Reading this register from ECAT clears Latch0 Status 0x09AF[1] if 0x0980[5]=0. Writing to this register from ECAT is not possible.

\* PDI register function acknowledge by Write command is disabled: Reading this register from PDI if 0x0980[5]=1 clears Latch0 Status 0x09AF[1]. Writing to this register from PDI is not possible.

PDI register function acknowledge by Write command is enabled: Writing this register from PDI if 0x0980[5]=1 clears Latch0 Status 0x09AF[1]. Writing to this register from PDI is possible; write value is ignored (write 0).

## 2.49.6 SyncManager Event Times

**Table 125: Register EtherCAT Buffer Change Event Time (0x09F0:0x09F3)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Local time at the beginning of the frame which causes at least one SyncManager to assert an ECAT event	r/-	r/-	0	

NOTE: Register bits [31:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

**Table 126: Register PDI Buffer Start Event Time (0x09F8:0x09FB)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Local time when at least one SyncManager asserts a PDI buffer start event	r/-	r/-	0	

NOTE: Register bits [31:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

**Table 127: Register PDI Buffer Change Event Time (0x09FC:0x09FF)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Local time when at least one SyncManager asserts a PDI buffer change event	r/-	r/-	0	

NOTE: Register bits [31:8] are internally latched (ECAT/PDI independently) when bits [7:0] are read, which guarantees reading a consistent value.

## 2.50 ESC specific registers (0x0E00:0x0EFF)

### 2.50.1 Power-On Values ET1200

Table 128: Register Power-On Values ET1200 (0x0E00)

		ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value	
1:0	Chip mode (MODE): 00: Port 0: EBUS, Port 1: EBUS, 18 pin PDI 01: Reserved 10: Port 0: MII, Port 1: EBUS, 8 pin PDI 11: Port 0: EBUS, Port 1: MII, 8 pin PDI	r/-	r/-	Depends on Hardware configuration	
3:2	CPU clock output (CLK_MODE): 00: Off – PDI[7] available as PDI port 01: PDI[7] = 25MHz 10: PDI[7] = 20MHz 11: PDI[7] = 10MHz	r/-	r/-		
5:4	TX signal shift (C25_SHI): 00: MII TX signals shifted by 0° 01: MII TX signals shifted by 90° 10: MII TX signals shifted by 180° 11: MII TX signals shifted by 270°	r/-	r/-		
6	CLK25 Output Enable (C25_ENA): 0: Disabled – PDI[6] available as PDI port 1: Enabled – PDI[6] = 25MHz (OSC)  NOTE: Only used in Chip mode 10 and 11	r/-	r/-		
7	PHY Address Offset (PHYAD_OFF): 0: No PHY address offset 1: PHY address offset is 16	r/-	r/-		

## 2.50.2 Power-On Values ET1100

Table 129: Register Power-On Values ET1100 (0x0E00:0x0E01)

		ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value	
1:0	Port mode (P_MODE): 00: Logical ports 0 and 1 available 01: Logical ports 0, 1 and 2 available 10: Logical ports 0, 1 and 3 available 11: Logical ports 0, 1, 2 and 3 available	r/-	r/-	Depends on Hardware configuration	
5:2	Physical layer of available ports (P_CONF). Bit 2 → logical port 0, Bit 3 → logical port 1, Bit 4 → third logical port (2/3), Bit 5 → logical port 3. 0: EBUS 1: MII	r/-	r/-		
7:6	CPU clock output (CLK_MODE): 00: Off – PDI[7] available as PDI port 01: PDI[7] = 25MHz 10: PDI[7] = 20MHz 11: PDI[7] = 10MHz	r/-	r/-		
9:8	TX signal shift (C25_SHI): 00: MII TX signals shifted by 0° 01: MII TX signals shifted by 90° 10: MII TX signals shifted by 180° 11: MII TX signals shifted by 270°	r/-	r/-		
10	CLK25 Output Enable (C25_ENA): 0: Disabled – PDI[31] available as PDI port 1: Enabled – PDI[31] = 25MHz (OSC)	r/-	r/-		
11	Transparent Mode MII (Trans_Mode_Ena): 0: Disabled 1: Enabled – ERR is input (0: TX signals are tri-stated, 1: ESC is driving TX signals)	r/-	r/-		
12	Digital Control/State Move (Ctrl_Status_Move): 0: Control/Status signals are mapped to PDI[39:32] – if available 1: Control/Status signals are remapped to the highest available PDI Byte.	r/-	r/-		
13	PHY Address Offset (PHYAD_OFF): 0: No PHY address offset 1: PHY address offset is 16	r/-	r/-		
14	PHY Link Polarity (LINKPOL): 0: LINK_MII is active low 1: LINK_MII is active high	r/-	r/-		
15	Reserved configuration bit	r/-	r/-		

## 2.50.3 IP Core

Table 130: Register Product ID IP Core (0x0E00:0x0E07)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
63:0	Product ID	r/-	r/-	Depends on configuration	

Table 131: Register Vendor ID IP Core (0x0E08:0x0E0F)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Vendor ID: [23:0] Company [31:24] Department NOTE: Test Vendor IDs have [31:28]=0xE	r/-	r/-	Depends on License file	
63:32	Reserved	r/-	r/-		

**2.50.4 ESC20****Table 132: Register FPGA Update (0x0E00:0x0EFF)**

		ESC20	ET1100	ET1200	IP-Core
Bit	Description	ECAT	PDI	Reset Value	
	FPGA Update (ESC20 and TwinCAT only)				

## 2.51 Digital I/O Output Data (0x0F00:0x0F03)

Table 133: Register Digital I/O Output Data (0x0F00:0x0F03)

Bit	Description	ESC20	ET1100	ET1200	IP Core
		ECAT	PDI	Reset Value	
31:0	Output Data	r/w	r/-	0	

NOTE: Register size depends on PDI setting and/or device configuration. This register is bit-writable (using Logical addressing).

## 2.52 General Purpose Outputs (0x0F10:0x0F17)

Table 134: Register General Purpose Outputs (0x0F10:0x0F17)

Bit	Description	ECAT	PDI	Reset Value	
				ESC20	ET1100 [63:16] config.
7:0	General Purpose Output Data	r/w	r/w	ET1200 [63:12]	IP Core config
15:0					
31:0					
63:0					

NOTE: Register size depends on PDI setting and/or device configuration

## 2.53 General Purpose Inputs (0x0F18:0x0F1F)

Table 135: Register General Purpose Inputs (0x0F18:0x0F1F)

Bit	Description	ECAT	PDI	Reset Value	
				ESC20	ET1100 [63:16] config.
7:0	General Purpose Input Data	r/-	r/-	ET1200	IP Core config
15:0					
31:0					
63:0					

NOTE: Register size depends on PDI setting and/or device configuration

## 2.54 User RAM (0x0F80:0x0FFF)

Table 136: User RAM (0x0F80:0x0FFF)

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
----	Application specific information	r/w	r/w	IP Core: Extended ESC features Others: Random/undefined	

Table 137: Extended ESC Features (Reset values of User RAM)

				ESC20	ET1100	ET1200	IP Core
							V1.1.0/ V1.01a
Addr.	Bit	Feat.	Description	Reset Value			
			<b>ESC Features</b>				
<b>0F80</b>	7:0	-	Number of extended feature bits	Depends on ESC Intel: V1.1.0-V1.1.1 31 V2.00 35 V2.2.0-V2.2.1 41 V2.3.0-V2.3.1 49 V2.4.0 51 V2.4.3-V2.4.4 142 V3.0.0 149 V3.0.1-V3.0.10 150 Xilinx: V1.01a 31 V2.00a 35 V2.02a 41 V2.03a-V2.03d 49 V2.04a 51 V2.04d-V2.04e 142 V3.00c-V3.00k 150			
			IP Core extended features:	Depends on ESC: 0: Not available 1: Available c: Configurable			
<b>0F81</b>	0	0	Extended DL Control Register (0x0102:0x0103)	1

### 3 Process Data RAM (0x1000:0xFFFF)

#### 3.1 PDI Digital I/O Input Data (0x1000:0x1003)

Digital I/O Input Data is written into the Process Data RAM by the Digital I/O PDI.

**Table 138: Digital I/O Input Data (0x1000:0x1003)**

		ESC20	ET1100	ET1200	IP Core
Bit	Description	ECAT	PDI	Reset Value	
31:0	Input Data	(r/w)	(r/w)	Random/undefined	

NOTE: (r/w) Process Data RAM is only accessible if EEPROM was correctly loaded (register 0x0110[0] = 1).

NOTE: Input Data size depends on PDI setting and/or device configuration. Digital I/O Input Data is written into the Process Data RAM at these addresses if a Digital I/O PDI with inputs is configured.

#### 3.2 Process Data RAM (0x1000:0xFFFF)

The Process Data RAM starts at address 0x1000, its size depends on the ESC.

**Table 139: Process Data RAM (0x1000:0xFFFF)**

		ESC20	ET1100	ET1200	IP Core
		4 KB	8 KB	1 KB	config.
Bit	Description	ECAT	PDI	Reset Value	
	Process Data RAM	(r/w)	(r/w)	Random/undefined	

NOTE: (r/w) Process Data RAM is only accessible if EEPROM was correctly loaded (register 0x0110[0] = 1).

## 4 Appendix

### 4.1 Support and Service

Beckhoff and our partners around the world offer comprehensive support and service, making available fast and competent assistance with all questions related to Beckhoff products and system solutions.

#### 4.1.1 Beckhoff's branch offices and representatives

Please contact your Beckhoff branch office or representative for local support and service on Beckhoff products!

The addresses of Beckhoff's branch offices and representatives round the world can be found on her internet pages: <http://www.beckhoff.com>

You will also find further documentation for Beckhoff components there.

### 4.2 Beckhoff Headquarters

Beckhoff Automation GmbH & Co. KG  
Huelshorstweg 20  
33415 Verl  
Germany

Phone: +49 (0) 5246 963-0

Fax: +49 (0) 5246 963-198

E-mail: [info@beckhoff.com](mailto:info@beckhoff.com)

Web: [www.beckhoff.com](http://www.beckhoff.com)

#### Beckhoff Support

Support offers you comprehensive technical assistance, helping you not only with the application of individual Beckhoff products, but also with other, wide-ranging services:

- world-wide support
- design, programming and commissioning of complex automation systems
- and extensive training program for Beckhoff system components

Hotline: +49 (0) 5246 963-157

Fax: +49 (0) 5246 963-9157

E-mail: [support@beckhoff.com](mailto:support@beckhoff.com)

#### Beckhoff Service

The Beckhoff Service Center supports you in all matters of after-sales service:

- on-site service
- repair service
- spare parts service
- hotline service

Hotline: +49 (0) 5246 963-460

Fax: +49 (0) 5246 963-479

E-mail: [service@beckhoff.com](mailto:service@beckhoff.com)
